Fig. 51.—External Printing Specification Record.

package), the travel requisition is pulled from the file, the date and inventory recorded, and the card with two samples of the form attached is sent to the office manager as the requisition for reprint.

A request for authority to reprint, illustrated at the bottom of Figure 51, is prepared and sent, with a sample form attached, to the supervisor of the originating department. This form serves three purposes: (1) It is a request for reprint, giving inventory statistics; (2) it is used as a reply from the supervisor, giving anticipated usage and authority for revision; and (3) it serves as a notice to the stationery stores that the order has been placed for a definite quantity to be delivered on a specific date.

After the above report has been returned from the department supervisor, the travel card is pulled from the open file, and the order portion and date wanted are recorded. If the form is to be printed by us, the buff travel card is sent to the print shop. If the form is to be purchased on the outside, the salmon travel card is sent to the purchasing department. The travel cards are returned to the stationery stores and are used repeatedly on future reorders.

In addition to providing a good inventory control, the travel requisition plan saves considerable time by eliminating the necessity of rewriting printing orders or individual requisitions. It also gives a running history of the form, which is valuable for establishing minimums and for determining the reorder quantity.

### How SERVEL REDUCED PRINTING COSTS

*Forms reproduced in Servel print shop:*

1. Paper stock is purchased in carload lots.
2. The quality, weight, color, and ream size of paper used is limited to as few items as possible.
3. Stock is bought in ream size and cut to requirements on our paper cutter.
4. Standard-size sheets are used to get the best cut from ream size without waste.
5. Forms are designed to the smallest standard size practical, so that the maximum number of copies can be printed on the single master, stencil, or plate.
6. White stock is standard. (The cost is 10 per cent less than colored stock.)
7. No. 4 sulphite is standard. (The quality is satisfactory for most work and the cost is considerably less than that of the better grades.)
8. Sixteen-pound stock is standard for jobs printed one side. (The cost is 10 per cent less than that of the 20-pound.)
9. Twenty-pound stock is standard for two-page jobs. (There are considerable savings on paper and collating. Its use also reduces the weight for mailing.)
10. Mimeograph stock is eliminated. Water-soluble ink is used on No. 4

- eliminates re-running the job to get the first number on top.
- (b) Hand stapling machines are placed in gangs and are attached to our foot-power paper drill. This permits placing two or more staples at the same time.
  - (c) A fork-arrangement paper divider is used for padding. This eliminates counting the sheets.
  - (d) Dealer literature is imprinted on the multigraph. A special feed guide was developed to feed two small circulars at the same time, which doubles the machine production.
  - (e) A special collating rack was developed. This consists of two tiers of shelves, each shelf holding a ream of letter-size paper. The paper is fanned so that the top sheet protrudes forward. The person collating uses both hands and works from the bottom up by removing the top sheet from each stack and holds on to the gathered sheets until the top stack is reached.

*Forms purchased outside.* Printing is purchased outside on jobs that can be bought more economically, or where the size is larger than the capacity of our equipment. Most of the forms purchased are reproduced by the offset method. We furnish the printer with the completed master ink copy ready for photographing. This eliminates expensive composition or layout cost and the necessity of obtaining proofs.

18

*Reports Used by the Office Manager*

As a practical matter, however, it is not always easy to decide what the content of a report should be. For example: The office manager, confronted with the task of preparing a report on a new layout for the office departments, may feel at first thought that a statement or plan of the present layout, together with the reasons why it is not as good as it should be, and a similar presentation of the proposed new layout, should comprise the essential features of his report. When, however, he starts the actual work of report preparation, related questions begin to arise in his mind. Should the report attempt to forecast the future needs for office space? Or is such a forecast, depending as it does on the anticipated increase in business, and on the general plans and policies of the company for the future, a matter that might better be left to other administrative officials? Should only one plan be presented, or should several possible arrangements be outlined? To what extent should costs be discussed? There is always the danger of intruding on what others may consider their legitimate field of work. Obviously, therefore, careful consideration must be given to the exact content of the report, particularly one of the kind just mentioned.

The second point to be borne in mind in preparing reports is that the person for whom the report is prepared is usually interested primarily in results and final recommendations rather than details.

This statement is not made with a view of disparaging in any way the practice of many competent and successful executives, who carefully analyze and study details in order that they be fully familiar with all the facts in the situation. The report writer must remember, however, that most executives have many things to think about. Whenever possible, long, involved explanations should be avoided. If statistics or numerous figures must be presented, the use of a graph or a chart will be found helpful.

Clarity, conciseness, accuracy, and logical arrangement and presentation of subject matter are also fundamental to the preparation of good reports. Nothing destroys the value of a report more quickly than vagueness, generalities, lack of precise statements and recommendations, or errors in facts and figures. The report writer should never lose sight of the fact that the primary purpose of all reports is to convey information and to secure action. If the "facts" in the report are incorrect, little reliance can be placed on the conclusions and recommendations. Likewise, a report characterized by an executive as "very interesting" or "well worth think-

ing about" is more often than not a failure, for the reason that it does not result in some positive action being taken.

Kinds of reports. The kinds of reports with which the office manager is concerned may be classified under three headings: (1) periodic departmental reports, (2) administrative or executive reports, and (3) special reports. Each will be considered separately in the order named.

Periodic departmental reports. Periodic departmental reports, such as monthly reports of operations, which the executive may require from each department head, are regularly prepared in many offices. Departmental records of performance usually form the basis of such reports. In fact, a summary of the data contained on these records, with an explanation of all unusual items, often comprises the principal substance of such reports.

It is important that the detailed records be kept in such a way as to facilitate their use for report purposes. An illustration from the practice of the sales department of a well-known concern aptly illustrates this point. Each of the 250 traveling salesmen is required to send the sales manager a weekly report of his activities. This weekly report contains the kind of information usually found in reports of this type, such as the total number of calls made on customers, calls made on prospects, value and volume of sales made, amount of dealer-help material distributed, notations as to the items in the line in which there seems to be a special amount of customer interest, and so on. These reports form the basis for the sales manager's monthly report to the general manager.

Clerks in the sales department summarize the information contained in the individual reports. To facilitate the preparation of the monthly summary, the various columns of the salesman's reports are so arranged that the clerks require a minimum amount of time to transfer the information to their summary sheets. There is no need for a reclassification of the information in a different form from that in which it is received by the sales office. The net result is that the time the clerks spend each month in summarizing this information for the sales manager, which, to a certain extent, is time that must be taken from other work, is cut to the minimum. Coördination of the form of periodic departmental reports with the detailed records upon which they are based, is a step which often results in eliminating much of the burden that frequently accompanies the preparation of such reports.

Use of the questionnaire method. One company found it advi-

able to prepare most of their routine sales reports in what might be termed the "questionnaire form." The various points on which information is desired are listed on a printed sheet, so that the report can be completed merely by inserting figures or brief comments. Sometimes simply a check mark serves the purpose. Whenever it is practical, this practice is well worthwhile for several reasons. It saves time in preparing the reports. The salesmen do not raise the objection that it adds excessive red tape to their regular duties. It also insures that the report will include all the necessary data, as nothing can be overlooked. Finally, it is of great help in analyzing the reports, as one quickly gets accustomed to looking for certain information in a certain place on the form.

#### TYPE OF INFORMATION USUALLY CONTAINED IN PERIODIC REPORTS<sup>1</sup>

Periodic reports of clerical activities usually indicate the volume, speed, accuracy, and cost of the work, so as to show whether a given quantity of work is handled with a desired degree of accuracy in a reasonable time and with due economy, taking service into consideration. Since each situation is likely to differ from others, specific rules for devising such reports are hard to give. The reports should normally show: (a) the volume handled, and the amount on hand, splitting up the figures of the different kinds of work if they vary in importance or difficulty; (b) the number of errors and the percentage of accuracy; (c) the speed with which the work is being completed, or the number and proportion of cases not being handled on schedule; and (d) the cost of doing the work, considering often only the major items of easily measured costs. These data should be shown for the current period and in comparison with other periods or with a budget or standard, and should be accompanied by brief comments explaining any unusual items.

#### MONTHLY REPORT FOR A POLICY-ISSUE DEPARTMENT IN A LIFE INSURANCE COMPANY<sup>2</sup>

Figure 52 illustrates a suggested monthly report for the policy-issue department of a large life insurance company. Comparisons are made with the preceding month on a monthly basis and with the preceding year on a year-to-date basis. If there is normally a wide variation between the various months, comparisons with the same month of the previous year might be substituted for the comparison with the preceding month. A quota, a budget figure, or a standard performance, if worked out for a department, should be shown along with the actual accomplishment; otherwise a figure for the average volume may be given.

Accuracy is reported only insofar as the errors affect persons outside

A quota, a budget figure, or a standard performance, if worked out for a department, should be shown along with the actual accomplishment; otherwise a figure for the average volume may be given.

Accuracy is reported only insofar as the errors affect persons outside

<sup>1</sup> Reprinted by permission from *The Office Supervisor*, by H. E. Niles and M. C. H. Niles, published by John Wiley and Sons, Inc.

<sup>2</sup> *Ibid.*

of the department. Errors made and caught within the department are not considered in this report. Sometimes it is well to consider in a departmental report the errors made in one division of the department and caught in another, as this will reflect the accuracy of the department as a whole; but such errors should not be grouped with the ones which leave the department, as these are usually of more consequence.

Speed of handling the work is treated in three ways in the report. First, the oldest case in the department is recorded to show whether any cases are taking an excessive time. The causes of the delays may also be shown. The next speed analysis is from the point of view of the applicant. This will be affected by how well the agent filled out the application blank, by how many requests for special information the underwriting department sends out, and by other factors which will be quite outside of the control of the issue department. However, the company will be judged partly by the speed with which it gets its policies into the hands of the applicant. To the head of the issue department this record has less importance than the third analysis, which shows the speed with which the cases are handled in his department, once the complete data are received.

The cost figure includes only clerical salaries, with adjustments for clerical time borrowed from other departments or actually lent to them. The net salary cost per policy issued is taken as a workable measure of efficiency from the point of view of cost. Next to it is shown the average salary per clerk. If this tends upward while the cost per policy issued tends downward, the situation is very satisfactory and indicates good management.

Under "Remarks" is provided space for recording the excess clerical time available to other departments but not used by them. This presupposes an arrangement for shifting. A consistently large figure for time lent or available for lending indicates that a permanent reduction of staff in the department might be desirable, and that the situation should be reviewed.

Fig. 52.—A Typical Monthly Control Report.

nual departmental executive report. The primary purpose of this report, which may be prepared by each department head for the chief executive, usually the president or general manager, is to summarize the results of the year's operations. It may also contain recommendations for the coming year. Clarity, conciseness, accuracy, and logical arrangement of subject matter, which have been previously mentioned, are applicable to the preparation of reports of this type. It is particularly desirable that annual departmental executive reports emphasize essentials and results rather than details. In writing the report, the departmental head should remember that matters that may be important to section supervisors in their daily work, and to him as the department head, are for the most part mere details from the point of view of the chief executive.

An office manager's annual report. The following extracts from an annual departmental report prepared by the office and personnel manager of a well-known company illustrate the main points of reports of this kind:

#### OFFICE SERVICE DEPARTMENT ORGANIZATION

The following comprises a list of the more important changes in the activities of the department during the year. Each has been undertaken with a view to improvement in service, decrease in cost, or both:

1. In March, arrangements were made for a closer control over all mimeograph, multigraph, and typing work requested to be sent outside, with a view to doing as much of this work as possible here, thus giving the same service, in point of time and quality, to the departments but at a considerably reduced cost. The results of this arrangement have been most gratifying, resulting in actual savings which can be definitely calculated at \$6128.

2. As a result of the operation of the bonus plan in the typewriting department, we have actually spent \$3600 less in 19— than in 19—, despite an average increased production per employee of approximately 33 $\frac{1}{3}$  per cent.

3. Effective November 21, Mr. Edwards, head of the Shipping and Receiving Department, was transferred from Mr. Payne's department to the Office Service Department, reporting directly to the writer.

4. Arrangements were made for providing additional and better service for the collection of dictating-machine cylinders.

5. A study of the special jobs which information clerks and others were called upon to do revealed the fact that to have an employee attached to the Office Service Department but available on call to any department having need of extra service for a few days to tide over a peak load, to fill in during vacations, or to take the place of a regular employee absent on account of sickness, would be a desirable plan. Such a person has

of a better control of the work done and the reduction in needless expense. We can point directly to a total of \$11,354 saved in 19— in comparison with 19—. This is equivalent to the average net profit on \$100,000 to \$125,000 of gross income.

Third, the special surveys and studies already completed have not only put into writing things which were merely a matter of personal knowledge before, but have also pointed the way to better organization procedure and methods. This work, in turn, has created on the part of executives, department heads, and others a greater appreciation of the value of proper organization and management. The list of special surveys and reports already requested and planned for 19— as given above, indicates clearly the trend of executive thinking on these matters.

In closing this report, I should be most ungrateful if I did not acknowledge with very sincere appreciation and thanks not only your own constant helpful guidance and constructive criticism, but also that of all of the executives of the company, and particularly that of Messrs. Robertson and Reader.

Respectfully submitted,

.....  
Office and Personnel Manager.

Special reports. As the name implies, special reports cover all unusual or special matters not included in periodic departmental administrative or executive annual reports. Inasmuch as the subject matter of special reports is surrounded by specific local conditions, it is difficult to outline a procedure that will be applicable in all cases. The method of securing the information, whether by questionnaire, by personal interview and investigation, by learning of the experience of others through books or magazine articles, or by a combination of all three, is one of the first questions to be decided. In a word, the first step is to determine as completely as possible the scope of the investigation.

Content of the special report. Since the form itself has much to do with the impression that the special report makes on the reader, it is of importance that the report writer be familiar with this phase of report writing. The content of the report should be divided into three main parts: (1) the introduction, (2) the body and (3) the summary or recommendations. The introduction usually contains the following: (1) the reason for the report or the authority on which it is made; (2) the kind of information that the report contains, or a brief statement of the subject of the report; (3) a statement of the way in which the material was secured, together with a list of all the sources of information used (or, if one wishes, reference to a complete list of sources may be given in the

too specifically what is wanted and when it is wanted. The subordinate is expected to produce, within the allotted time, the complete report, prepared in the proper form and showing the information desired.

A short time ago the writer had occasion to witness the difficulties and the resulting adverse reactions of an office manager who was called upon about 9:30 one morning to prepare by noon a certain kind of report for use by the president at a luncheon conference that day. By suspending work on everything else and working steadily without interruption, the office manager could have had the report prepared within the allotted time. However, the president called him into the office on other matters, most of which were more or less routine and could just as well have waited until later, no less than five times during the course of the morning. Naturally, the report was not completed on time, nor did the office manager become very enthusiastic, either about reports in general or about the methods of this particular chief executive.

Special reports have their place and most certainly are necessary to the successful conduct of a modern business organization; but the executive for whom they are prepared should appreciate the work that is involved in their preparation and should understand clearly the relation that they bear to regular work and to the general record-keeping activities of the company. In concerns in which the office manager has a direct interest in the preparation of all reports, there is a particularly good opportunity for him to bring about the proper coördination in this respect.

**A special report on centralized employment.** The following report on the desirability of establishing a centralized employment department for applicants for executive positions is a specific example of a well-prepared special report.

In accordance with the resolution of the Executive Committee, adopted at its meeting of March 23, I have been giving consideration to a general Company policy and plan for centralizing our employment work in connection with applicants for executive positions. I have discussed the matter with Messrs. Johnson, Hardy, and Lang.

My conclusions and recommendations are as follows:

1. The principle of further centralizing such employment activities is sound for the following reasons:

(a) By bringing together at one point a list of all requirements for employees, better control will be secured. As it is now, persons seeking such employment may be sent to any one of a number of departments or individuals.

(b) Centralization will enable us to give better service to the organization. Under our present plan, executives and department heads who have vacancies have no single person to whom they can go to secure specific assistance. Furthermore, transfers and promotions from within the Company, with the exception of rank-and-file workers, are difficult largely because there is no central clearing house through which the needs of all departments pass.

(c) Centralization will allow us to better develop our contacts with outside organizations. Both from our own point of view and from that of outside organizations, societies, institutions, and so forth, it is more economical and efficient to clear all matters of this kind through one point.

What is needed, in a word, is a centralized control and a centralized listing of all employment needs throughout the organization.

2. Any plan of centralization which may be adopted should be established on the assumption that the person in charge will make preliminary selections only. This is the principle now followed in connection with rank-and-file workers. As the nature of the position to be filled increases in importance and salary, the practical desirability and necessity of following this principle quite obviously arises also. The central clearing house should be simply a service activity, established to aid executives and department heads.

3. Such a centralized function should confine its efforts, for the present at least, simply to caring for our own needs. Our ability to be of assistance to outsiders will develop gradually and naturally from this. An attempt to render too far-reaching a service might easily consume an unwarranted amount of time. However, to discover specifically just what types of calls may be made on us by customers, friends, and others outside the Company, I suggest that these requisitions be passed on to the central clearing house as they are received. As we develop a centralized plan for caring for our own needs, we will be in an increasingly better position to help others, particularly as it seems likely that some contact work will be necessary for our own purposes.

4. For the present, I suggest that Mr. Todd, or someone designated by Mr. Johnson and Mr. Smith, or someone else designated by Mr. Lang, continue to interview applicants for positions in their respective fields. However, instead of interviewing all who apply, as is the case now, the person in charge of the central clearing house should talk with all applicants first, sending on to Messrs. Todd and Smith only those whose training and experience appear to warrant further investigation.

5. If the principle of centralization of employment is approved by the executive committee, either along the lines suggested in the previous paragraphs or along others, a memorandum should be prepared stating the policy and plan adopted, naming the person appointed to handle the work, and requesting the staff to list their needs at the central point. In this memorandum emphasis should be laid on the fact that personnel needs arising from a desire to replace present employees with better ones, as well as needs due to specific vacancies, should be listed. In

addition, the staff should be urged to notify us of competent persons who are seeking positions and whose experience and training might be of value to us.

I believe that the policy and plan outlined in the previous paragraphs will be found to be practical and effective, yet simple enough so as not to be an undue burden on any single person or group.

**Eliminating unnecessary reports.** While periodic, executive, and special reports are essential in every business organization, it is undeniably true that in many cases an undue amount of time, money, and energy are spent in their preparation. This is particularly likely to be so in the case of periodic departmental reports. Unnecessary reports are a great economic waste. The elimination of as many of these as possible would bring about a saving in clerical and supervisory pay rolls, and in materials and equipment. Since the progressive office manager is concerned, both directly and functionally, with effecting economies, he should be especially watchful to see that all reports are necessary and that they are of practical utility to those for whom they are prepared.

**Two typical examples of unnecessary reports.** Two instances which came to the author's attention are of interest because they illustrate the waste involved when reports are not carefully controlled. In one concern it is the duty of one clerk to read certain classes of incoming mail daily, abstracting the salient points of the correspondence which would be of interest to departmental executives, and preparing a daily report which is then duplicated and distributed to these men. A long while ago, one of these daily reports failed to reach the supervisors because somewhere between the clerk's dictating machine and the duplicating room the report was lost. At that time an elaborate report was devised which recorded the time the mail was received, the time the clerk started dictating, the time he finished dictating, the time the record was transcribed, the time the master was returned to him for checking, the time it was sent to the duplicating department, and the time they finished the duplicating work and put it in the outgoing mail basket. The thought behind all this, of course, was to attempt to prevent the loss of any future abstracts or fix the blame should they go astray. What was entirely overlooked was that this error had occurred but once in the long history of this abstracting task, and that the cost of producing this report was much greater than the benefits it yielded. Consequently, for years this report continued in existence. At first, the manager inspected the report

report of all customer claims received. This report gave the details of each claim at great length and had been originated during a time when the quality of the product had become uncertain and efforts were being made to improve it. Obviously, the president felt that he was keeping in touch with the customers' reaction to the product and that the report was therefore justified. He entirely overlooked the fact that 70 per cent of the report consisted of histories of claims which were not concerned with the product and which had to do with losses in transit and material damaged in transit. The ratio of these cases to the total business was normal in the light of experience of other companies with their transit claims. This report continued in existence daily for some twenty-two years and required three to four hours of clerical time daily to prepare it. To make matters worse, a number of copies were circulated throughout the organization, some seven in all. Recently, a new manager came to the claim department and, in the course of his investigation of the activities of his clerks, discovered the report. When the matter was called to the attention of the executives who received it, all agreed that the report served no useful purpose and it was immediately discontinued. However, over these years each of the seven copies had been meticulously filed away in seven different departmental files. The waste, of course, was enormous.

Figure 54 illustrates a simple form which can be used to inventory the reports that are being compiled within an organization, in preparation for a study to simplify some and eliminate others.

Dr. H. A. Hopf, speaking before the Office Management Association of Chicago, suggested the following method to eliminate useless reports.<sup>5</sup>

#### PSYCHOLOGICAL COST CONTROL

Here is a method, thoroughly tested in practice, of eliminating unnecessary clerical work:

After ascertaining as accurately as possible the total costs involved in the preparation of reports deemed to be unnecessary, the office manager should quietly affix to the top page of each such report a large label imprinted in red with the following text: "The cost of preparation of this report is . . . . dollars per month. Do you wish it continued and this cost charged to your department?" All he need do while the reports make their rounds through the office is to sit back and await results. They may be slow in coming, but sooner or later they are

<sup>5</sup> Hopf, H. A., *Management Review*, American Management Association, October, 1943, p. 367.

bound to present themselves, for the psychological effect of the label is well-nigh devastating.

Mr. J. H. Barrett, of the Murray Corporation of America, made these comments on reports for the use of management:<sup>6</sup>

Not the least of the salesmen among us are those who have responsibilities for the design and form of reports for management use. These authors have a great responsibility in an enterprise of any complexity. They need real salesmanship to put across their ideas to management in such concise, undistorted and fool-proof form that management not only will not be deceived as to their import but will be able to take proper action on them.

Emphasis cannot be placed too strongly on the cardinal principle of good salesmanship that the product must be good for the buyer or repeat orders will not be forthcoming. The report must satisfy the Boss; it must lead him to sound conclusions and effective action, or your days as an author are numbered. That is where your salesmanship has to meet its most exacting test. It is futile to insist that the Boss accept your reports prepared in the manner and form of your preference. You should, of course, have the opportunity of selling your ideas to him, but reports are made for the user and not for the maker.

Perhaps you have had an experience similar to one which I had about thirty years ago, just before I was given my first executive position. The manager of the accounting department in which I worked was sorely beset because the board of directors wanted a certain report which seemed not only impractical but of no use whatever. He was unable to bring himself into a frame of mind in which he could get it started. I offered to prepare the report, promising dual results. First, the report would positively and completely fulfill the request, and second, it would be so obviously impractical and useless that no subsequent report of that nature would be requested. That is exactly what happened. To have argued against preparing the report would have been disastrous. By using an indirect approach, the desire for the report was killed.

The aim of real business is the making of profits. From that premise, let us adopt one potent precept that no avoidable expenditure be incurred which will not result in an increase in net profits over that which would otherwise obtain.

It is axiomatic that no report can be issued without incurring an expenditure. Therefore, the first test that a report must meet is whether it serves to increase gross income or to decrease costs in proportion to the cost of the report itself. It may be recognized that too many reports are the rule rather than the exception. To have too many things of any sort inevitably results in a decline in the regard for any one of them. This is particularly true of reports. A favorite method of some authors is to quietly discontinue certain reports of doubtful value and

<sup>6</sup> Barrett, J. H., "Observations on Reports for Management Use," *Annual Proceedings, National Office Management Association*, 1945 p. 121.

then to wait to see if they are missed. Frequently nothing is ever heard further about them.

No executive should have his time taken up in digging through a lot of figures when the essence of the story could be told in summary form. Eliminate the fluff and the Boss' respect for your good judgment will rise. It is far better to be ready to amplify the information on any point than it is to make the Boss dig for the meat of the kernel. A study of the mental processes of the Boss will soon tell you just how much detail should be put into a report to satisfy his particular taste. Sometimes the Boss prefers a tabulated summary, with supplemental schedules backing up individual items shown in the summary.

### CHOICE OF UNITS

Often a point can be made in a report by the use of per-unit figures rather than gross amounts. An expenditure of \$10,000 may seem much larger than one stated as 1¢ per unit. On the other hand a similar expenditure may seem too large as \$1 per unit. Another desirable application of this principle might be the showing of the number of additional sales units which would have to be sold to recover the expenditure of the \$10,000.

To my mind, one of the most serious faults in report design is the very prevalent existence of distortion caused by double-exposure or hybrids.

One interesting example of the elimination of distortion, which also utilizes the idea of reducing costs to a per-unit basis, may be found in a study of the cost of the operation of a privately owned automobile. Many companies pay their employees, who drive their automobiles in company service, on the basis of a fixed amount per mile driven. If the employee finds that the mileage payment is high enough to make him a profit, he has the incentive to drive more miles in order to make more money. But the distortion produced by a fixed amount per mile is accentuated by the fact that even when the rate per mile is low, the employee is better off by driving more miles, unless, of course, the rate is too low. The difficulty arises from the fact that any statement of the cost of operating a passenger car in terms of cents per mile is a hybrid. There are two costs, not just one. The cost of ownership is distinct from that of operation and these two costs should never be combined. If you had owned one of the three popular standard cars during the period just before the war, and had driven it 10,000 miles a year, it would have cost you roughly five cents per mile, but if you had driven it 20,000 miles per year it would have cost you but three-and-a-half cents per mile. To get a true picture, the costs of ownership must be segregated, because such costs do not vary particularly with the mileage driven.

Be constantly on the alert for hybrids and distortions. They are so deadly because they tend to induce unwise decisions on the part of management. It is better to have no report at all than to have one which misleads the Boss into unwise actions.

## CAPTIONS

A common defect in reports is the ambiguous language used in headings, captions and explanatory texts. It is astounding to find so many reports which are faulty in this respect. No matter how carefully the figures in a report may be prepared, no matter how free from hybrids, no matter how well arranged, the value of a report may be totally destroyed by the injudicious use of words. This is particularly true in the case of tabulations, which should be considered much as one should consider the wording of a telegram. The mental approach in drafting a telegram is to use as few words as possible, but to choose them deliberately to be sure that the full intent is unmistakable. The same approach should be made in designing a report for management use.

It is extremely difficult for any person to check his own work. We are all imbued with enough confidence in our own creations to be inclined to assume that we did the job right the first time. That is a peril which must be faced with determination. When the report has been completed, whether it be a new one or a new issue of an old one, hesitate long enough to give it a microscopic last look. Are you sure that it is a thoroughly competent picture of the message you want to convey?

## REVIEW OF REPORTS

One of the prime principles which I have kept before me is that of challenging all methods, all procedures, and all reports which remain unchanged over any considerable period of time. The methods, procedures and reports of last year must be deficient in some respect. If we cannot do better now than we did last year, we are slipping backwards. Progress continues, and if we do not keep step with it, we are in an ebb tide. It is a great help to the author of a report to take a critical attitude toward his product in an attempt to improve it, lest he find himself in a rut. The chief difference between a rut and a grave is only its depth. Let's keep out of the ruts.

In summary, there are ten main points which an author should consider in making a report to management:

1. The author of a report to management must be as capable a salesman as the man who sells his company's product.
2. The report must be designed to satisfy the Boss' requirements for facts on which to base decisions and actions.
3. It must be tailor-made to fit the Boss' mental type.
4. It must pay its way.
5. The author should know the purpose for which the report is to be used.
6. Computations must be scrutinized for reasonableness of results.
7. The report must be as brief as possible.
8. Great care should be used to eliminate "double-exposures."

9. The language should be certain in interpretation, not only in explanatory texts but in column headings and captions.

10. Constant review must be made of the source and preparation of the figures used, and of the end-use of the report.

Conclusion. By way of conclusion, it might be worthwhile to list some of the factors that have been suggested as contributing to the development of effective and dynamic internal reports:

1. Determination of scope or content.
2. Elimination of unnecessary details.
3. Frequent check to determine if information is meeting the needs effectively.
4. Presentation of data in terms easily understood.
5. Frequent use of charts and graphs.
6. Discontinuance of unnecessary reports.

19

*Office Costs and Budgets*

and costs in the plant, at least, are getting the attention they deserve. Unless the office manager provides himself with adequate tools to measure and control costs, top management will either force him to do it or, worse yet, step in and do the job for him. In either case, continued neglect of this essential office function cannot fail to discredit the office manager and his profession.

Just prior to World War II the Cleveland Chapter of the National Office Management Association conducted a survey of a number of representative offices to discover what was being done in this field. Here is what was found:<sup>1</sup>

1. Those functions on which unit costs were kept were: transcribing cylinders, centralized typing, centralized filing, mimeographing, addressing of advertising, comptometer operation, making out payroll envelopes, key punch operation, billing machine operation, writing of accounts payable vouchers, order handling, duplicating forms, issuing invoices, issuing purchase orders, and writing collection letters. *But actually very few companies reporting were doing more than keeping costs on one or two of these operations.* They were keeping comparative records of production but not costs. In fact, most of the companies investigated simply do not keep unit costs.

2. Every company agreed that it would be well to have a fixed rule of procedure in ascertaining costs. They felt that the necessity of making a thorough and complete analysis of the factors involved was one reason so few accurate costs were kept.

3. When questioned on a logical starting place for compiling costs, stenographic work came first, report typing second, and any job carrying a great deal of volume was third. There was general agreement that the operation which takes the greatest amount of time should be costed first.

4. Only two large manufacturing companies reported that they used time study in determining unit costs.

5. All agreed that planning of the floor arrangement and its analysis on a cost basis was important but the majority did not devote a great deal of attention to it.

6. Everybody agreed that flow of work should be studied, but only one or two reported any actual steps along this line.

7. Fewer than 50 per cent of the companies which kept any costs took into consideration the cost of the office equipment and the interest and depreciation on it in determining the costs of a particular job.

8. Except for the same two large manufacturing plants mentioned above, not a single company reported using measured incentive plans.

9. Those companies which kept costs on certain operations compared

---

<sup>1</sup> Harris, G. L., "The Control of Office Unit Costs," *Annual Proceedings*, National Office Management Association, June, 1939, p. 99.

them office by office but did not compare them with costs in other companies.

It is evident from the results obtained in the above survey that office management must focus its attention upon its own costs of operation if it is to retain the confidence and respect of top management.

Measuring the cost of office operations. The first step in measuring the cost of office operations is to determine a unit, or a number of units, of work for which costs can be secured. Thus in a wholesale house, for example, the cost per order handled may be used as the unit of calculation. A life insurance company may use the cost per policy issued; a university, the cost per student registered; a bank, the cost of handling each depositor's account. In every case, it will be observed, the fundamental principle is the same, namely, the selection of a unit of work and the calculation of a cost based on that unit.

In considering the cost of doing office work one must constantly bear in mind the fact that the office is a service department to the other departments of the company. In view of this, the problem of unit office costs resolves itself into a question of selecting a number of kinds of service that the office performs for the various departments and not only calculating the cost of each of these services in units of work performed, but also carrying this procedure to its logical conclusion by charging the other departments, at a given rate per unit, for the service. If, for example, a cost per letter or per line is established for the transcription work performed by a centralized stenographic department, the various departments using this service should be charged accordingly.

Organizing for cost control. Cost control and its normal complementary function, budgeting, must be built upon a firm foundation if they are to serve the intended purpose. It would be sheer waste of time, effort, and money to establish a cost system and adopt budgets if the functions which they are to control have not been standardized. How can one attempt to control costs and estimate expenses, if all the details of the work to be controlled are not standardized and the performance measured? The first step in cost control, then, is to examine the work being performed, analyze it, and simplify it. There is no point in setting standards on inefficiently performed jobs.

A program of office cost control. Mr. Fred T. Walker, of Procter & Gamble, outlines such a program in this manner:<sup>2</sup>

The first step should be the selection of an executive who will be assigned the responsibility of decreasing the cost of all paperwork wherever it occurs. If no concerted effort has been made to control this expense, the cost of such a man, and any help he needs, will pay off at the rate of two or three to one. This man's first assignment should be the taking of an inventory of all paperwork in the organization and evaluating the cost of performing this paperwork. He should know:

- (1) What paperwork is being done and where;
- (2) Who is doing it and when;
- (3) How much time is being spent on it;
- (4) Salaries of the employees doing it;
- (5) How it is being done;
- (6) Cost of purchased forms and forms printed or duplicated.

Before this inventory is begun, however, obtain the cooperation of all department heads, superintendents, and foremen. They must know the purpose of the program, concur with its aims and methods, and agree to assist the man selected to run it. One of the quickest ways to get this done is through meetings at which the whole program is thrashed out. These meetings should not stop at the top level of supervision but should filter on down to the level of work heads, chief clerks, etc. Get plenty of steam behind the program and keep interest and enthusiasm up. Set a goal for each department.

Once the program has been presented and accepted by all who are concerned, the paperwork inventory can be begun. Each department should be requested to gather all the paper forms which they use and prepare a written description, a form survey sheet, about the function of that form. An outline for this form survey sheet should probably list the following headings:

1. Form number, name and latest revision date.
2. History and purpose. How long the form has been in existence, what problem first gave rise to its necessity, and why the form is still necessary; i.e., to what practical use is it now being put?
3. Origin. The department, section, and employee creating the form.
4. Time. Length of time to accumulate information and prepare form.
5. Frequency. When and how often made up.
6. Copies, distribution, and routing. Number of copies made up, where each copy goes, what it is used for, and how long retained.
7. Data shown. A brief summary of the information shown on the form unless such is apparent from the form itself.

---

<sup>2</sup> Walker, F. T., "A Program of Office Cost Control," *The Office*, September, 1945, p. 41.

forms and discourage any department from embarking on any questionable clerical activity.

The next step is to go after the 25 per cent to 35 per cent of clerical work which was not reflected in the study of the forms. Here the methods engineer must do a real detective job. He has three leads to work on:

1. "Source of data shown" on form survey sheets.
2. An inventory of constantly recurring information (in letter form) in various department files.
3. Interviews with all office workers to further trace the sources of information which they record on forms and in reports.

The third source will prove most fruitful. Information obtained from the clerks, stenographers, etc., in these interviews can also be worked into the form of job descriptions and used for job evaluation purposes.

Throughout the course of the program a careful estimate of the hours of time conserved through the elimination of non-essential work should be recorded and reported by department heads. Records of the number of workers in each department should also be maintained and followed up to insure that the office force is actually reduced in line with the hours conserved. It is entirely possible to allow the reduction in personnel to take place by moving surplus workers into jobs vacated through normal turnover, and it is recommended that within reasonable limits this method of making reductions be followed. The program will gain the increased acceptance and the cooperation not only of supervision but of the employees themselves if this is known. It would be well to bring out this point in the first meetings with supervision when the whole program is being talked over. Immediate and careful consideration should be given to salary reclassifications where changes in job duties occur. Here again employees will welcome the program if an opportunity is allowed them to earn more money because of increased job responsibilities.

One of the most important points in applying the above program is to know the progress at any stage. To do this the following points should be kept in mind.

1. Know at the beginning of the program just how much money is spent for paperwork.
2. Know in which, and how much in each department or activity this money is being spent.
3. Set a goal that can be reached. A 15 per cent to 20 per cent reduction in most cases will be possible.
4. Keep monthly progress reports in terms of
  - (a) Ratio of cost of paperwork to plant production volume;
  - (b) Hours conserved;
  - (c) Office workers declared surplus;
  - (d) Dollars saved;
  - (e) Per cent of progress in each department toward your goal;

- (f) Cost of operating methods engineer's staff;
- (g) Hours of new or additional work absorbed by each department without increases in staff and also decreases in work volume.
- (h) Office equipment conserved, i.e., typewriters, calculators, files, desks, chairs;
- (i) Reduction in number of forms and money thus saved.

The above program will pass through two stages: (1) The discontinuance of non-essential or duplicated duties, responsibilities, and reports, and the subsequent absorption of slack or idle time by reassignment of duties in order to release personnel; (2) The simplification and streamlining of the remaining essential work with a second reassignment of duties to absorb slack time thus created. The second portion will pay off more slowly and will require the more detailed attention of your methods engineer to work out shortcuts and simplified methods.

Measuring production. After having analyzed and simplified the functions which remain after elimination of all non-essentials, the next step is to attempt the measurement of production of these functions. At the outset it should be understood that measurement of output is meaningless unless that output is compared with previously established standards. For example, a statement that the average typing output of a department is 175 lines per person per hour is meaningless until we know that a previously determined standard for that precise type of work has been set at 150 lines per hour.

The establishment of these standards and the measurement of the office work is a difficult, painstaking endeavor. Unless it is carefully planned and carried out, the results may be worthless. Assuming methods study has been applied to the jobs under consideration, the standards are then set—sometimes by means of time-study, sometimes on the basis of carefully evaluated experience—and the performance measured against the standard or yardstick.

Methods of United States Rubber Company. This company has made fine progress in the measurement and costing of office work. Since the following report was published, the work has advanced but the basic philosophy and the plan of procedure have not changed.<sup>2</sup>

In a manufacturing plant such as ours, the biggest problem is the variation in volume from week to week, month to month, and season to season. Consequently, we employ the use of more figures for control purposes than the average office. These variations are large enough

Fig. 56.—Factors Affecting Office Volume.

to necessitate additional personnel and cause changes in our layouts, if certain parts of our business expand or contract, or are reorganized. To indicate the amount of variation, a chart has been prepared of some of the basic facts affecting our office volume. (See Figure 56.)

The percentage of increase has varied sufficiently to warrant a close control over the items involved. The percent to the right of the unit is a comparison with a standard month in 1936, or, in other words, the variation from this standard month as 100 per cent indicates the increased volume from the standard considered, at the time, as an average working condition. This information is used in relating the number of personnel in a departmental office to the various indices, and as indicator points for basic information when additional office equipment is being purchased.

### UNITS OF MEASUREMENT

The units of measurement shown in Figure 57 are used where it is possible to obtain a count of the units handled. This chart also shows the unit used and the method of obtaining the unit. These units are self-explanatory with the exception of one or two. *Man-days* is a term used for the number of time tickets received daily. This unit is used because the number of days a department is working may vary out of relationship with the number of employees in the shop, due to a short-time operating schedule.

<u>DEPARTMENT</u>	<u>UNIT</u>	<u>How Obtained</u>
Sales Department	Orders Received	Hand Count
Sales Department	Items on Order	Hand Count
Sales Department	Units Shipped	Calculator Tabulation
Order Entry & Billing	Orders Entered (by outlet)	Hand Count

Stenographic Department	Sheets Duplicated	Mechanical Counter
Filing Department	Pieces Filed	Measurement
Tabulating Department	Card Count	Measurement
Tabulating Department	Number of Hours Machine Operating	Chart
Accounts Receivable Dept.	Invoices	Mechanical Count
Comptometer Department	Tires Produced	Calculator Tabulations
Stores Accounting	Requisitions	Hand Count
Timekeeping & Payroll	Personnel on Payroll	Accumulative Records
Timekeeping & Payroll	Man-Days	Daily Accumulative Records

Fig. 57.—Units of Measurement of Office Work.

The number of hours tabulating equipment is in operation is recorded for use as a basis to determine the load on the machines and the depart-

ment. In some circumstances this information makes it possible to reduce equipment, or indicates the necessity for additional multipliers, sorters or printers.

We realize, of course, that these units are not constant in all cases. As for example, the Order Entry at one time of year may have fewer items per order than at another time, depending on the season. However, in general, the variation is not large enough to affect materially the number of personnel required, or the operating cost of the department per order.

Rarely have I found, and I am talking more about industrial organizations than those institutions where the volume varies to a lesser degree, a general usage of such units as those mentioned above. Many offices have forgotten the possibility of making a written daily report of the work completed the day before, the number of units uncompleted in the department, and the plans for bringing the work up to date for the current day.

On the other hand, some companies require that this information be made available to Management by nine o'clock in the morning, and if the condition warrants, a meeting is held with the supervisor concerned. If there are a number of interrelated departments—one depending on the other—under separate supervision, a meeting of all departments may be required. As a result of this meeting help may be transferred from a low point of activity to a peak point where additional help is required.

#### USES OF A DAILY REPORT

An example of a daily report simplified is the number of dictaphone cylinders received during the day, the number transcribed and the number remaining. The uses for this type of report are many and may be varied according to the departments, the type of business and the trouble experienced in the past. Their first value seems to be enabling the supervisor regularly, at definite times, to review the entire situation in a department and make plans to eliminate conditions which are unsatisfactory.

Many times we have found, where such a report was considered necessary only until a condition was taken care of, that the supervisor became negligent. Consequently, trouble was experienced in meeting the schedule because of a lack of review. There seems to be a tendency among supervisors, if they are left alone, to use the system aviators call "flying by the seat of their pants," in managing their departments.

A further use for daily reports, such as the count on the number of invoices billed, is to make up a comparative monthly report, entered daily, of the number of invoices received in the department, the number completed and the number remaining in the department. This record will indicate whether the department is falling behind, or improving its situation in order to meet the closing date, as the month progresses.

The mere use of figures will not prevent trouble. However, their continued use, if the supervisor is alert, will have the tendency to preclude

unusual conditions. For example, the supervisor can look back to a certain time when 600 invoices were being produced per day by 15 employees in his department, or 40 invoices per operator. With a current load of 800 invoices per day, he knows he needs 20 operators, unless the work is to be allowed to fall behind schedule.

Another form we use records the number of order entries sent to the Shipping Room by quarter-hour intervals by outlet throughout the day. Its function is to indicate an even or uneven output of work from the department, besides showing the flow of work into the department. A record like this causes each department to work its orders on a more even basis, shifting clerical help from one operation to the next.

In addition to using unit reports to secure daily, weekly and monthly controls, their use can be extended to a monthly cost sheet showing the total cost—by department—of salaries and wages, the cost per unit, and a comparison with the previous average for the year to date. (See Figure 58.)

In our company, we reduced unit costs in the Order Department from 25¢ per order to 15¢ per order. During this period of cost reduction, there was no change in methods; therefore the saving was accomplished only because of better management. The relationship between personnel and volume was followed more closely by supervision, and waiting periods were eliminated by obtaining a more uniform flow of orders through the department.

Through a cost report of this kind it is possible to make a check-up where new methods or procedures have been installed. I believe that, in the future, Management will not only demand and expect current cost information on office operations, but, if we are to keep the cost at a minimum, it will also require estimated costs of procedures and reports before they are adopted as a part of the operating routine.

We have, up to this time, considered only those departments where the type of work is specialized and where there are definite units of work which can be counted or measured. There are departments, however, where there are no such units available and where the establishment of units is not practical, yet the same need exists there and possibly a greater need than for the types of work mentioned.

#### CONTROL IN THE ACCOUNTING DEPARTMENTS

The accounting functions in our plant are broken down into the following departments: General Accounting, Budget, Cost, Stores and Plant Accounting. Each of these departments has a special function, and because of the nature of rubber accounting, there is need for a department which performs and specializes on miscellaneous clerical duties previous to the final accounting operations.

This work has been centralized in a service department which can be referred to by any name, but which we happen to call our Comptometer Department. The work involves sorting, tabulating and comptometer operations, using peg board strips wherever possible. The department

is divided into two main divisions, one being the General Comptometer Group which takes work from each of the Accounting Departments. The other section is divided into groups assigned to the reporting of production, sales, assembling of miscellaneous distributions such as labor, accounts payable, material requisitions, and the preliminary assembling of manufacturing expense distributions.

In setting up this department we departed from standard organization practices for accounting departments. All clerical and machine work

requiring a minimum of contact with accounting departments has been segregated. The accounting departments' supervision and personnel are specializing on their particular functions. This grouping together of a large clerical force under one department has resulted in a high degree of specialization, with the usual good results from improved personnel training, specialized skills, more uniform output per clerk and better supervision and planning.

A quick indicator of volume variations helps to prevent a loose condition of excess clerical help. As we all know, if the loose condition continues, it is difficult to obtain the standard output per operator later when additional volume is thrown on the department. This is why we make rapid reductions in our personnel when volume decreases, and rapid increases when the condition is reversed.

#### OPERATORS GRADED

We find, too, that our supervisors in the Comptometer Department have eliminated a chronic office complaint—that of grading individuals. We grade our comptometer operators in three groups, Class 1, 2 and 3. Class 3 is a beginning operator, Class 2 a medium fast operator, and Class 1 is an operator having at least two or three years' experience plus general experience on the different types of work being done in the department.

Rate changes are based on the classification of the operator. Working on a beginner program as we are, it is necessary for us to follow the progress of each operator closely, as in six months one operator may equal the production of another operator who has been with us a year or more. This sometimes happens in spite of all the tests used to prevent the hiring of personnel not adapted to this type of work.

It is important to know the value of each employee to us and make our rate changes accordingly. Further, being aware of the variations in skill between operators enables us to keep the quality of personnel up to standard and to handle them more intelligently.

An example of an hour control follow-up was the installation of requisition distribution on a revised method. Our first month's work required 351 hours. With some refinements in the procedure, the number of hours needed dropped to 250 the following month, 215 hours in the third month, and at the present time we are doing this, with some variations in volume, in 108 to 150 hours per month. We find that, once hours are reduced on a given piece of work, the supervisor will strive to better these hours, knowing it is possible to repeat a previous reduction and bring new operators up to previous standards.

The Budget Department is mentioned as another example of the use of an hour control because of the difference in size between it and the Comptometer Department. The latter has seventy-five employees, as compared with nine in the Budget Department. Yet the value of the control to the supervision is the same in one as it is in the other.

### TIME STUDIES

Where the units of work are highly repetitive and the amount of work to be performed per unit is constant, time studies can be used for more accurate control and for incentive payment. Time studies have been used in our company for cost estimating purposes, determining of savings in the purchase of office equipment, control purposes and in some cases for incentive payment. The latter use has been limited, but in each case where incentive payment has been used, the success of the plan has been dependent on the accuracy of the information upon which the standards are based.

The use of reports enables us to measure the output of our various departments and unquestionably affects the output of each department and of each employee, with the result that the working morale is better than in an office without such controls. This result was not obtained by merely issuing a number of reports. Reports in themselves mean nothing unless the supervision and the personnel have been gradually taught their uses. This cannot be accomplished in a month or two. Good management in an office, like the management of any part of business, requires a nice balance between the various factors involved, which are personnel, salaries, supervision, management and company policies.

**A job order cost system.** Certain office operations lend themselves very readily to the application of job order costs. An example of this type of cost determination and control is the way in which the duplicating section of the office management division of a steel company handles this work.

A short time ago, the duplicating operations in this company were centralized under the control of the office manager. The services being rendered were analyzed and determined to be inadequate, and as a result obsolete equipment was replaced and the unit gradually undertook the task of providing certain duplicating services to the entire general office. At the outset, the policy was established that no work would be undertaken which could not be done more economically in the office than if it were sent outside. In order to adhere to this policy, a plan of costing was required. A job order cost system has proved to be successful.

The equipment of this section included several typewriters used for stencil cutting and copy typing, a Vari-Typer, a stencil duplicator, an office offset machine, an addressing machine, and a col-

lating machine. The work handled by this group includes the preparation and issuance of circular letters and bulletins, manual pages, office forms (new and revised), and a small amount of direct mail advertising performed primarily for the advertising department.

As soon as the group was organized, studies were made to make certain that the operators were trained in the proper performance of their jobs and that all possible simplifications in handling the work had been considered.

It was then decided to consider each job handled on the basis of four factors: first, composition; second, duplicating; third, addressing; and fourth, processing. Composition work includes straight typing, preparation of offset masters, preparation of stencils, and, when required, purchase of zinc photographic plates. The duplicating work covers all the operations involved in stencil and offset duplicating. The addressing factor includes the work necessary to address material, and the processing factor includes such operations as collating, stapling, padding forms, wrapping, etc.

A job ticket was devised (see Figure 60) so that all time spent on each of these four factors could be calculated separately. An automatic time recorder is used to clock in and out on each phase of the job. For example, should a two-page typing job come to the department and should it be decided to run this on the offset duplicator on a paper plate, the job instructions are written on the card and scheduled for the various operators. When the com-

Fig. 60.—Job Ticket.

posing operator reaches the job, she clocks on the job and proceeds to type or Vari-Type the necessary masters. At the conclusion of her work on the job, she clocks out and inserts on the job ticket the amount of material she used, i.e., two or three masters.

The job is next passed to the offset operator, and, according to schedule, she picks it up, clocks in on the job, determines her paper specifications and the number of copies from the job ticket, and proceeds to run the work. She, in turn, enters on the job ticket the number of sheets she used in running the job and clocks out.

It is now necessary to collate page one and page two of this job, so it moves to the processing group, which, in turn, clocks in, performs the necessary collating function, and clocks out, and the job is completed.

At the end of each day, the supervisor collects the job tickets for all work finished and shipped and proceeds to cost the material and labor items. From a schedule she can determine the cost of the masters and extend that figure. According to a description of the paper she can determine the paper cost and extend that figure, and should any other material costs have been involved they also would be calculated. As far as labor is concerned, this is calculated by subtracting the time stamped at the left of the card from the entry immediately above it. The time recorder calculates in hundredths of an hour. The total time on the job may have been .68 hours. This is entered, multiplied by a standard rate, and extended to the right. This is done for all time accumulated on the job. The total of the material and labor costs is calculated and entered at the bottom right-hand corner.

Some explanation is necessary about the method of calculating labor cost. This firm works a seven and one-half hour day, and the labor rate is determined by assuming at the outset that only six hours of this day will be spent directly in jobs which can be costed. The remaining time includes personal time and the performance of duties necessary to the work of the department but which are actually burden. Some of these duties would be cutting new addressing plates, inking up and washing down the offset machine each day, checking of addressing lists, experimenting with new types of work prior to actual performance, and so on. Proofreading, incidentally, is charged as part of the composition factor.

The daily wage of each operator is calculated, and the total of these wages plus the entire salary of the supervisor is divided by the total of the productive hours of all the operators. This yields

### BONUS PAYMENT PLAN

The work in our Central Transcribing Departments has offered a profitable and interesting opportunity for such a study. Centralization of this service was undertaken as early as 1924 in our Boston office, and subsequently extended to four large field offices. Relatively large volumes of similar types of work justified a detailed analysis of each operation. Methods, layout, and equipment were standardized. Job specifications were drawn up; and time standards were established for each operation. A bonus payment plan, based upon these time standards and standards of quality, was instituted first in Boston and later in the other large field offices.

Inasmuch as the work performed for various operating departments differed in respect to average number of lines per sheet, vocabulary requirements, quality of dictation, and so forth, a plan of rotating the work among operators according to the order of reception was put into effect. Work rotation, especially in the smaller units, has helped to develop flexibility of the working staff and higher standards of personnel capacity. Rotation has the added advantage of avoiding any appearance of favoritism and any chance that equally productive effort would be paid unfairly.

Under the bonus payment plan, time lost waiting for work is considered the responsibility of supervision and administration, and is therefore deducted from total working time before the computation of premium minutes, and so does not penalize individual operators.

The immediate effects of job definition, output measurement, and bonus payment were speedier completion of good quality work and a more efficient use of equipment and other items involving relatively fixed expense. This resulted in average linage cost reductions of approximately 25 per cent.

The bonus payment plan has had intangible, as well as measurable, advantages. Turnover of personnel in this service has been relatively small, pointing to the probability of employee satisfaction. The quality of the work by well-trained operators has been kept at a high level.

In addition to the foregoing advantages, measurement of output in lines presented an excellent basis for computing unit costs and measuring the relative efficiency of the different transcribing departments.

### COMPUTING MONTHLY COSTS

Monthly average costs per line for each unit were calculated by dividing the total cost by the total number of lines typed. Since typing accounts for three-quarters of salary costs, or approximately 60 per cent of the total cost of the service, the line was the best available unit of measure. In this manner we obtained rough indices of departmental performance which required adjustments for factors beyond the control of supervisors or sectional office service administrators. Such factors as varying salary levels prevailing in different localities, varying rents, etc.,

had to be evaluated and discounted before arriving at final appraisals of efficiency.

Monthly unit costs for each transcribing department were averaged and then used as the basis of departmental charges for the service. Each month the number of lines produced for each "customer" department was multiplied by the predetermined unit cost to arrive at departmental charges. Questioning of charges by department heads has led to studies which have increased administrative knowledge of costs and ability to control service expenses.

Operators and supervisors are enabled to compare actual with standard performance each day by computing work in minutes relative to standard, from their daily work sheets. Special tables simplify these computations. This daily control enables the supervisor to correct promptly many high-cost-producing situations.

Each week summaries showing the performance of individual operators relative to standard are posted in each Central Transcribing Department, and have stimulated healthy interest among the personnel and probably have helped to provide non-financial as well as financial incentives to profitable work.

A weekly report showing departmental experience in lines produced per hour, substandard work, minutes of waiting time, absence, lines per sheet, and so forth, enables the general administrator of this service to control the Boston unit and to advise administrators in district offices regarding cost control. Monthly expense statements, which compare actual with predetermined unit costs, summarize relative departmental efficiency in rendering required service.

The employment of unit costs as symbols of managerial effectiveness has given life and meaning to the expense statements, and has contributed in no small degree to the development of central transcribing budgets.

4. The budget is then forwarded to the Home Office for review and approval.

The final approved budgets are then returned to the office service administrators, and provision is made for comparison of budgets with monthly and cumulative actual expenses on subsequent reports of departmental expense.

Comparisons of this type serve as guides to profitable analysis. The analysis and interpretation of discrepancies between budgeted and actual expenses discloses much information helpful to cost control. Furthermore, the recognition of favorable comparative cost showings of individual administrators provides powerful incentives to the continued progress of cost control.

**Summary.** Measuring clerical costs and budgeting office expenses are matters in which every progressive office manager should take an untiring and vital interest. In some cases, to be sure, particularly in smaller concerns, complete and detailed analyses of costs may not be needed. Whatever the situation may be, however, it is obvious that until the office manager is able to prove conclusively, by facts and figures, that his is an efficiently and economically conducted department, he is in a vulnerable position. Only after he has put his own house in order should he suggest the adoption of cost-reduction programs and the installation of better management methods elsewhere.

## 20

### *The Selection of Office Employees*

It is almost trite to point out to the practical office manager and to the student of business the fact that at no time in the past twenty years or more has the matter of employer-employee relations been more important than it is today. The many activities usually referred to as personnel administration, which are carried on by business organizations, the growth in the strength of labor organizations, and the activities of the federal and state governments in the field of social security, all illustrate how important are the developments in this field.

Obviously it is not possible to cover here the whole field of industrial relations. The discussion therefore will be confined to those phases of personnel administration with which the office manager is usually concerned—namely, employee selection, employee training, compensation, and other personnel activities. Each of these four subjects is discussed in this and the three chapters which follow.

#### THE PROFESSION OF PERSONNEL ADMINISTRATION<sup>1</sup>

It is well, at the outset, to dispel one source of confusion which may present itself to the executive who has looked into the literature of employee-employer relations or noted the practices of neighboring companies. "Industrial relations," "labor management," "personnel management," "personnel administration"—these and other terms have been used loosely and often interchangeably to describe that phase of management which is concerned with the most effective use of manpower. This diversity is merely a symptom of the "growing pains" of a relatively young profession, and the implied differences appear to reside primarily in the number and types of activities which have been organized on a formal basis.

The scope of industrial relations is considered by many to be more comprehensive than that of personnel administration, though the juncture at which the one assumes the proportions of the other is not sharply defined. The passage of the National Labor Relations Act, the impact

of miscellaneous labor legislation, and the more pronounced role of unions in employer-employee dealings are primarily responsible for a noticeable shift in emphasis to the broader meaning, particularly among the more sizeable companies.

For practical purposes, the terms "personnel administration" and "personnel department" have been adopted as most representative of current usage. However, in practice these designations do not constitute absolute criteria with respect to the nature of the programs they describe. Many "personnel or office managers" in both large and small companies spend a good part of their time sitting in on bargaining conferences, assisting in the settlement of grievances, and attending sessions devoted to planning and policy-making. Often, they find it necessary to delegate much of the responsibility for recruitment, training, placement, safety, and other personnel activities to members of their staffs. Such executives are, in effect, functioning as personnel relations managers. Again, other so-called "personnel directors" are primarily employment managers, performing few duties to warrant the former designation. It is evident, therefore, that the individual company, in establishing an organization for dealing with human relations, must exercise sound judgment in determining the extent to which the project constitutes a full-fledged industrial relations program. This, in the last analysis, must be the guide to the appropriate designations for the various phases of the undertaking until such time as more precise definitions are formulated.

*Nature of the personnel function.* A rather definitive statement of the nature of the personnel function is embodied in the blueprints of the reorganized and enlarged program of centralized control of personnel activities in a large company. This reads in part:

"The personnel function is all-pervasive throughout our organization. It cannot be relegated exclusively to a specific department in the same sense that manufacturing is the specific function of the Manufacturing Department. The policies we adopt with respect to personnel must represent a consolidation of the aims of the top executives, the individual department heads, the supervisors down the line, and our employees in the ranks. At all times, the more long-range requirements which present themselves to the personnel executive as a result of his research and close intimacy with various phases of human relations must be taken into active consideration. Our personnel manager and the members of his staff assist in the formulation and coordination of policies and procedures and facilitate their application through continuous consultation with operating personnel and through the provision of expert advice and specialized assistance."

From the foregoing, it is evident that the personnel department is not an operating unit, except within its own confines. Rather, it maintains a staff relationship with the other departments of the organization, and its success is largely dependent on the coöperation and active collaboration which it receives. Such coöperation stems from a sympathetic understanding of the role of such a department. Top management sets the pace in this respect. If it adopts a clear-cut personnel policy which

is eminently fair to all concerned, if it is sincere in its endorsement of the contemplated program, if it has selected a high-grade specialist to direct the work, and if it is prepared to accord him recognition in the form of definite status, responsibility and authority, the way is paved for organization-wide acceptance of the new project.

Today there is much tangible evidence of the personnel and office manager's enhanced position. For example, it is now accepted as best practice that he should report directly to the chief executive or other high-ranking official with company-wide rather than departmental jurisdiction. In some companies with particularly well-developed personnel and industrial relations departments, it is not uncommon for the individual directing the program to enjoy the rank of vice-president on a par with operating vice-presidents.

Activities of a personnel department. Companies follow various patterns in assigning personnel responsibilities. Therefore, the following outline of activities classified by Divisions can be considered chiefly as an inclusive guide which may differ in accordance with the basic conditions prevailing within each company:

1. The Director of Personnel or the Office Manager may be charged with the following responsibilities:

- a. To formulate policies of industrial relations in collaboration with executive officers, and to implement those policies.
- b. To see to it, in collaboration with the appropriate line personnel, that the company's personnel relations policies and practices are executed.
- c. To aid in the interpretation of management policies to employees, and of employees' points of view and attitudes to management, and, in collaboration with appropriate line and functional personnel, to interpret the company and the job to employees.
- d. To aid all who direct the work of others to become better personnel administrators.
- e. To establish and maintain contact with the labor union movement.
- f. To aid in all collective bargaining activities.
- g. To inform and to advise the management on matters affecting personnel relations.

Employment division

- a. New employment: develop sources—recruit—interview—check references—authorize physical examinations—clear papers.
- b. Tests: interest—aptitude—trade—other.
- c. Induction program.
- d. Changes in status: transfer—promotion—layoff—leave of absence—other.
- e. Salary and wage adjustments.
- f. Employee rating.
- g. Termination interviews.

- h. Vocational guidance.
  - i. Personnel records and statistics.
3. Medical division
- a. Physical examinations: pre-employment—annual—special.
  - b. Medical treatment and advice.
  - c. First aid.
  - d. Nursing service: investigation of absences—inspection of premises—home visits.
  - e. Health education.
  - f. Sanitation standards.
  - g. Elimination of health hazards.
  - h. Records and statistics.
4. Safety division
- a. Safety standards.
  - b. Inspection of design, quality, and so forth, of equipment and materials for adherence to established standards of safety.
  - c. Safety inspections.
  - d. Elimination of safety hazards.
  - e. Investigation and report of accidents.
  - f. Promotion of safety committee work.
  - g. Safety education: manuals—meetings—contests—other.
  - h. Records and statistics.
5. Training division
- a. Training for production: job instruction—vestibule—other.
  - b. Advanced training: instructor—supervisory—technical—executive.
  - c. Preparation of training materials.
  - d. General education: educational refund plan—library—company publications—other.
  - e. Suggestion system.
  - f. Coöperative relationships with outside training and educational agencies.
  - g. Records and statistics.
6. Benefits and services division
- a. Group insurance: life—health—accident—compensation.
  - b. Mutual benefit association.
  - c. Hospitalization plan.
  - d. Legal aid.
  - e. Retirement plan.
  - f. Thrift and savings plan.
  - g. Dismissal compensation.
  - h. Cafeteria.
  - i. Recreational activities: social and athletic programs.
  - j. Miscellaneous services.
  - k. Records and statistics.
7. Employee relations division
- a. Participation in collective bargaining activities—interpretation of policy.

- b. Grievance adjustment: participate in grievance procedure—follow up on all cases to insure that required steps have been taken.
- c. Facilitate individual and group management-employee contacts.
- d. Records and statistics.

*8. Personnel research division*

- a. Studies on all phases of personnel and industrial relations—testing programs, safety, health, and so on.
- b. Job analysis, evaluation and classification (on coöperative basis with other divisions and departments).
- c. Preparation of manuals and forms.
- d. Salary analysis.
- e. Development of standard practices and procedures.
- i. Personnel relations audit.
- g. Maintain records of, and report to management on: cost of living—market rates of wages and salaries—wage and salary plans, vacation plans, and so on, of other companies.
- h. Coöperation with all divisions on research and statistical activities.
- i. Miscellaneous research and compilation of statistics.

and specific statement of the nature of the position and of the personal qualifications and characteristics that one who probably would be successful in the position should have. Thus, such items as a detailed list of the duties of the position, educational requirements, age, sex, physical qualifications if any, starting salary, maximum salary, promotional opportunities, and other pertinent factors, which together comprise the main points of the job, are set down. One of the principal purposes of preparing job specifications is that the person interviewing applicants can have a definite standard by which to judge the ability of the various prospective employees.

Figure 61 illustrates a personnel requisition form used by a well-known company.

Preparing job analyses and specifications. Although it has come to be regarded chiefly as a tool for salary control and administration, job evaluation also is closely related to successful selection and training. The basis for sound evaluation is careful analysis of the components of the position. This same analysis can be translated into specifications for selection and training. To be effective, job analysis should be a continuing function. Since we shall discuss job analysis and job evaluation in relation to payment in later chapters, the following paragraphs and illustrations are in-

<sup>2</sup> "How to Establish and Maintain a Personnel Department," Research Report No. 4, American Management Association, 1944, p. 100.

tended to indicate the manner in which the National Broadcasting Company obtains information through job analysis to be translated into job specifications and into the personnel requisition. The following procedure is used for the analysis of new positions:

1. When a department head wishes to establish a new position, he notifies the Job Analyst of the Personnel Department.
2. The Job Analyst makes an appointment with the department head, or with whomever he may designate, to discuss the duties of the new position. The Analyst records a description of the duties, at the same time checking the degree of various kinds of responsibility which the job entails, the amount of experience and education needed for the position, and so on.
3. The Job Analyst consolidates the information obtained in Step 2 and types it on a job description form (see Figures 62 and 63). This involves recording the duties of the position in terms of verbs of action.
4. The Analyst evaluates the position by assigning a point value to each factor analyzed and then determining in which classification the total point evaluation places the position. She also compares the position being evaluated with other positions in the department and in the company before setting a final classification and salary range for it.
5. The Personnel Director notifies the department head by memorandum of the classification and salary range of the new position.
6. Job descriptions are filed by salary ranges in individual department books. Each description is identified by a code number keyed to the salary book, which contains names, salary ranges, position title, and classification of all employees.
7. A completed copy of Form B (Figure 63) is forwarded to the Employment Office for use as a job specification in selecting the applicant requested by the department head through personnel requisition.

Fig. 63—Job Description (*Cont.*).

It can be seen that information on such factors provides those charged with the responsibility for selecting new employees with fundamental yardsticks for intelligent appraisal.

**Sources of supply for office workers.** Job specifications or their equivalent give the employment manager or interviewer the specific information he needs in order to seek and interview applicants. The first step, of course, is to secure applicants. Employment managers use several sources of supply for office workers.

**Employment agencies.** A very considerable number of companies make extensive use of employment agencies, especially in large cities where there are many agencies that specialize in providing office employees. While there are certain objections to employment agencies, especially from the employee's standpoint, the writer is of the opinion that the agency provides a convenient source of supply not readily obtainable otherwise. The employment agency is a useful clearing house to which employees wishing to secure a position may go and to which employers needing applicants may come. It may be that the agencies, especially the larger ones, cannot give a great amount of personal attention to each applicant

2. To detect the presence of remediable physical defects in order to enable the worker to correct them.
3. To determine the presence or absence of serious organic disease, either of which may have an important bearing on employment selection.
4. To prevent the spread of communicable disease by the exclusion of infected persons.

*Advantages.*

1. Presents a favorable opportunity for health education.
2. Enables the early discovery of disease.
3. Makes possible the proper placement of the worker.
4. Helps to prevent or lessen the effects of epidemics.
5. Tends to reduce absenteeism, when used as a part of a health service.
6. Is a factor in lessening accident occurrence.
7. Reduces the possibility of unjust claims for injuries.
8. May increase efficiency and production through proper placements.
9. Provides a means for economic control of future medical expense.

Protection for the worker, the fellow workers, and the industry are the chief motives that should actuate the inauguration of pre-employment physical examinations. They should never be adopted solely with the idea of weeding out the unfit.

Efficiency tests. Efficiency or work sample tests are those given to a person trained in a given operation to see how well he can do it. Under this heading come typing and stenography, comptometer, billing-machine, and punch-card operations, and any other work for which mechanically trained people are hired. A sample of the work is given them to determine how well they do it. While tests of ability such as these have the merit of giving the applicant a practical job to do, it must be remembered that, from the applicant's standpoint particularly, tests given in this way may be somewhat unfair, in that the applicant, being desirous of securing the position and being especially anxious to make good on this trial, may become nervous and fail to do as well in the test as she could do under normal circumstances.

Mental alertness and aptitude tests. Such tests are an effort to determine ability in advance of training on the job. Traits tested by this group range from physical fitness and mental ability to temperamental suitableness. They are the tests by which a company attempts to avoid unprofitable training and unsatisfactory end results. In this connection it should be borne in mind that at least 90 per cent of all applicants are untrained for the particular jobs that they are to do.

Type of Item	Capacity Measured	Significance in Office Work
1. Arithmetical reasoning .....	Ability to solve elementary reasoning problems in arithmetic	Adequacy for elementary mathematical work and promise for advanced work
2. Business information .....	Interest in and acquaintance with business problems	Extent of knowledge of business information is likely related to interest in work
3. Simple calculation .....	Facility with simple arithmetic problems	Well-established arithmetical bonds promise accuracy in such work.
4. Checking and comparing, for errors	Ability to notice details	Inability to notice errors and omissions forecasts trouble
5. Classification .....	Judgment in simple business situations	Putting things where they logically, or by a learned system, belong
6. Copying .....	Handwriting	Consistency and legibility necessary
7. Following directions .....	Ability to follow rules or guides	Understanding and following directions essential
8. Filing, numbers and names .....	Locating appropriate groups	Speed and accuracy in adopting new group systems
9. Grammar .....	Command of English	Correct transcription
10. Motor speed .....	Muscular flexibility	Machine operation
11. Numerical judgment .....	Judgment in estimating	Number sense
12. Oral instructions .....	Oral memory	Pay attention to and follow directions
13. Problem solving .....	Practical ability	Understanding what to do in typical situations
14. Spelling .....	Command of English	Correct transcription
15. Substitution .....	Learning new habits	Speed and accuracy in adopting new combinations
16. Verbal tasks .....	Breadth of verbal interest	Level of verbal intelligence an index of promotability
17. Verifying .....	Strength of established habits	Speed and ease with which acquired information can be used is a promise of quick absorption of similar tasks
18. Vocabulary .....	Verbal facility	Level of command of English

Fig. 64.

The mental alertness test is nothing more nor less than a general intelligence test. It has been found to be of most value as an aid in initial selection. Such a test (without regard to the particular kind of clerical work involved) will aid materially in selecting the better candidates for employment. When given between the initial and the final interview, it helps eliminate many obviously unfit candidates and thus saves considerable time and expense. A mental alertness test seems to indicate better than any other type of test what is known as "general promotability," which is an indication of the probable job level to which the individual is likely to be promoted ultimately.

An aptitude test is one which will indicate (before specific training) the degree of success an individual probably would attain if he were given the requisite training. If it becomes desirable to promote a number of employees to clerical work consisting primarily of discussion and correspondence, an appropriate aptitude test would indicate which employees would have the greatest chance of success and which would be most likely to fail. The test scores, therefore, could be used in conjunction with other pertinent evidence in reaching some decision on which of the employees to promote.<sup>2</sup>

In its interesting report on "Experience with Employment Tests," the National Industrial Conference Board, Inc. has prepared a useful table which includes the types of items found in clerical tests in use and which gives some interpretation of the particular type of item and the function or functions that the test evaluates.<sup>4</sup>

Two examples of clerical tests. A popular condensed mental alertness test is the Wonderlic Personnel Test. It is a short-form mental ability or mental alertness test which was originally developed and used in a large financial organization. The instruction sheet which is reproduced in Figure 65 is indicative of its nature and make-up.

Another test form which is representative of many in use is the Minnesota Vocational Test for Clerical Workers. The instruction sheet is reproduced in Figure 66.

The whole subject of tests is a large and technical one. There is not enough space for an extended study of it in this book. An office manager who proposes to adopt such tests in his own organization should carefully consider the matter from every angle and should certainly fortify himself with the necessary knowledge re-

garding the principles of psychology and their application to tests of mental ability.

WONDERLIC

# PERSONNEL TEST

## FORM A

NAME. \_\_\_\_\_ Date. \_\_\_\_\_  
 (Please Print)

**READ THIS PAGE CAREFULLY. DO EXACTLY AS YOU ARE TOLD  
 DO NOT TURN OVER THIS PAGE UNTIL YOU ARE  
 INSTRUCTED TO DO SO**

This is a test of problem solving ability. It contains various types of questions. Below is a sample question correctly filled in:

REAP is the opposite of

1 obtain, 2 cheer, 3 continue, 4 exist, 5 sow \_\_\_\_\_ [5]

The correct answer is "sow". (It is helpful to underline the correct word.) The correct word is numbered 5. Then write the figure 5 in the brackets at the end of the line.

Answer the next sample question yourself.

Gasoline sells for 23 cents per gallon. What will 4 gallons cost? \_\_\_\_\_ [ ]

The correct answer is 92¢. Therefore just place "92¢" in the brackets.

Here is another example:

MINER MINOR—Do these words have

1 similar meaning, 2 contradictory, 3 mean neither same nor opposite? \_\_\_\_\_ [ ]

The correct answer is "mean neither same nor opposite" which is number 3 so all you have to do is place a figure "3" in the brackets at the end of the line.

When the answer to a question is a letter or a number, put the letter or number in the brackets. All letters should be printed.

This test contains 50 questions. It is unlikely that you will finish all of them, but do your best. After the examiner tells you to begin, you will be given exactly 12 minutes to work as many as you can. Do not go so fast that you make mistakes since you must try to get as many right as possible. The questions become increasingly difficult, so do not skip about. Do not spend too much time on any one problem. The examiner will not answer any questions after the test begins.

Now, lay down your pencil and wait for the examiner to tell you to begin!

*Do not turn the page until you are told to do so.*

Final selection. The final step in the usual employment procedure is the selection of the successful applicant. Only in a small number of cases does the employment manager, office manager, or interviewer make the final selection. The usual procedure is for the interviewer to make a preliminary selection from among all those who apply, but to leave the final selection to the executive in whose department the vacant position exists. Thus, if fifteen persons apply for a vacant position in the bookkeeping department, the interviewer may select four or five applicants who he thinks

are the best of the group and send these one by one to the head bookkeeper or chief accountant, who will interview the applicants again and make the final selection. In this way the department head is relieved of the routine work of interviewing a considerable number of persons, but at the same time he has an opportunity to make the final choice.

Employment records. The principal records that should be kept, in order that the office manager may have complete information regarding the personnel, are the following:

1. Application blanks. Everyone who applies for a position, regardless of whether he is employed, should be required to fill out an application blank. Considerable study has been given to the

question of exactly how much and what kind of information should be given by the applicant on the application blank. However, such points as name, address, business, and home telephone, married or single, salary expected, educational record, record of previous positions held, business and personal references, reasons for desiring to leave present or last position, and so on, are among the more usual questions asked. Application blanks or cards are usually filed alphabetically by the name of the applicant.

For those applicants whose qualifications are such that they may be considered for a position which may open to them in the future, it will be necessary to classify and cross index by occupations the application blanks which are retained and filed. Figure 67 shows an application blank which is designed to meet the general needs of most companies and which incorporates the specific requirements of the company concerned.

2. *Employee's personal history card.* The employee's personal history card is a fundamental and indispensable record of present employees. When a new employee is hired, the personal history record card is started. This card provides spaces for recording the progress of the employee during his period of employment. In addition to his personal history, such as name and address, which may be copied directly from the application blank, the card provides space for showing the name and number of the department to which the new employee is first assigned, the initial salary received, changes in departmental assignment and salary that may subsequently take place, date and reasons for leaving, and so on.

In addition, in cases where a company conducts employee-training classes, the personal history card should provide spaces for showing the kinds of courses the employee has taken, his grade or standing upon the completion of the course, and so on. Furthermore, in companies that sell stock to their employees under some kind of a stock-ownership plan, where thrift or saving plans are in force, where employees serve in social activities, or where a group insurance plan is in operation, the personal record card should provide spaces for recording this information. Figure 68 shows a complete employment-history record.

3. *Record of labor turnover.* Records of labor turnover, together with analysis of the reasons why employees leave, give the office manager the most useful and interesting sort of information regarding the effectiveness of present personnel policies, as well as the attitude of the employees toward the company as a whole and

Fig. 69.—Record of Labor Turnover.

Office personnel records. No single text can hope to cover the combinations of forms which are in use or which might best fit the needs of any particular company. Only careful survey and determination of needs and requirements will enable the office manager to arrive at any conclusion as to those forms which will facilitate the program of personnel administration.

In many organizations the employment records, in addition to application blanks, employee's personal history card, and labor turnover record, may consist of all or several of the following types of records, some of which are used in accumulating data for such central records as those herein described:

- a. Personnel requisition.
- b. Source of applicant's record.
- c. Job specification.
- d. Preliminary application form.
- e. Preliminary and final interview records.
- f. Medical examination report.
- g. Pre-employment test report.

Fig. 70.—Monthly Turnover Report.

- h. Bond application.
- i. Reference inquiry and reply.
- j. Employment notification.
- k. Notice of change in status and/or salary.
- l. Training record.
- m. Periodic merit ratings.
- n. Attendance and punctuality record.
- o. Accident report.
- p. Individual production records.
- q. Termination form.
- r. Suggestion record.

These forms and records exist in increasing frequency somewhat in ratio to the size of the company. The names by which these forms are designated also vary, but in general the designations are descriptive of their nature and purpose. Such records are not in themselves effective, but integrated purposefully into a program of personnel research and administration they can serve well and should be regarded as a dynamic tool.

# 21

## *Training and Promotion of Office Employees*

The old-school point of view towards employee training was that employees should secure all their education in school and that no educational activities need be or should be carried on by the company itself beyond those that might be necessary to instruct the new employee in the details of his position. Indeed, some companies still follow this practice to a large extent.

Obviously such training is inevitably of the hit-or-miss kind. The new employee first spends a short time listening to the department head explain the work of the department. He is then given a desk and some work to do and told that the person next to him will answer any questions he may want to ask regarding the way in which the work is to be done. The result of such a haphazard plan is that the employee makes many unnecessary mistakes and acquires information regarding the duties of his position in a most unsystematic manner.

Today progressive firms realize that such methods are extremely wasteful. As a result, organized training for office employees is regarded as a fundamental and essential part of a well-balanced and thorough personnel program.

Advantages of training office employees. After the use of careful selection procedures at the time of the employee's entry into the company, it is no less important that steps be taken to offset what are very often recognized shortcomings in order that fullest efficiency and employee adjustment may be obtained. A policy of promotion from within the company has little meaning if no assistance is offered to the employee so that he may acquire the skills and information needed for advancement. Some feeling exists that worthy and ambitious employees will seek to advance and improve of their own accord. This is true in some instances,

but more often than not such efforts are spasmodic and only indirectly related to company needs.

Particularly in those companies with expressed promotion and transfer policies, formal classroom training courses have been developed to prepare employees for advancement. There has been a healthy trend towards development of planned on-the-job training as well. The trend in the direction of more training results from the fact that measurable advantages are to be found.

Training equips the employee with such skills as are necessary to do the job well. It therefore enables him to make up for lack of specific experience. It prevents deficiencies and so reduces expensive turnover.

Training well done produces greater efficiency and lowers salary expense. It results in higher quality and better service. Training can effectively cut down errors and uneconomical operating waste. It reduces turnover. For these reasons it can be a factor in improving morale and loyalty to the organization. Supervision can be reduced, and better adherence to and execution of company policies result.

The point can be made that the employee places a value on intelligent guidance and that training provides advantages for him. Where incentives are operative, a direct increase in earning power should come about. In other cases, indirect increases in earning power bring benefits. These may come through promotion or through greater flexibility and adaptability. When the employee knows his job, he feels greater security. The work tends to require less effort, and the employee gets greater satisfaction and interest through an understanding of requirements and abilities.

Types and methods of employee training. Induction procedures are often set apart from specifically designated training activities. However, the tangible result of a selection program is an influx of employees new to the company, all of whom must be oriented and trained.<sup>1</sup>

Induction procedures. Each of these men and women represents to the company a tremendous potential in good will, loyalty, and steady, skillful service. To each of these individuals, in turn, the company represents a potential of work satisfaction, pleasant associations, and fair treatment. The extent to which these potentials are realized by both

<sup>1</sup> "How to Establish and Maintain a Personnel Department," *Research Report No. 4*, American Management Association, 1944, p. 40.

will depend in good measure on the manner in which new recruits are introduced into the organization. Obviously, a well-balanced personnel program will not provide extensive controls over the quality of personnel hired and then leave to chance the reception accorded the newcomers, the information given them, and their progress on the job.

It is the duty of the personnel officer or office manager, therefore, to appraise the effectiveness of existing methods of orienting new employees and to introduce a sufficient amount of standardization into the process to insure that every individual receives uniform consideration. At the same time, the program must retain sufficient flexibility to allow for varied needs on different jobs in different parts of the organization.

A number of objectives have been posited for the induction program.  
Broadly, the intention is:

1. To encourage in the employee the feeling of "belonging" by extending him a courteous and friendly welcome.
2. To give the employee accurate information about the "policies which govern management and the practices which it endeavors to observe in its relations with its employees."
3. To teach the employee to perform the job to which he is assigned and to promote his understanding of his responsibilities and privileges in relation to the workplace.
4. To insure by systematic follow-up in the early stages of employment that the measures cited in (1), (2) and (3) above have operated to secure the desired adjustment in the worker to his work environment, and to the company as a whole.

Following is a summary outline of an induction program for new employees. Because it is really a composite of the programs of a number of companies, the outline is both general and comprehensive. The various items should be studied in the light of the induction needs of the individual company, as influenced by the character of the operations carried on, the nature of the employee groups involved, and other specific considerations. Only in this manner can the necessary modifications of procedure be determined.

#### PARTICIPATION OF THE PERSONNEL DEPARTMENT

- A. Introductory information.
  1. Company—history, development, organization, management, products—also the industry, if this is thought desirable.
  2. Personnel policies—what the new employee can expect of the company and what the company expects of him.
  3. Terms of employment and general rules and regulations.
  4. Employee benefit plans, off-the-job activities, self-improvement opportunities.

(The above information may be presented in booklet form, or better still, booklets may be used to supplement verbal explanations.)

5. Company facilities.
6. Community facilities.

7. Job—general remarks about the department, its organization, personnel, type of work, hours, salaries and opportunities. Introduction to company or department executives.

B. Follow-up interview.

This may be left to departmental supervision but should, in any case, be included. It presents an opportunity to answer any questions on the employee's mind and to ascertain his reaction to the induction program. It may call for a repetition of some or all of the introductory information and may also include a tour about the offices.

### PARTICIPATION OF THE LINE ORGANIZATION

The following may be handled by line supervision or may be delegated to staff assistants or training supervisors:

A. Introductory information.

1. Introduction to departmental supervision.

If the information imparted by the employment department has all been given at one time, it will be desirable to repeat a great deal of information on the company, its policies, etc. This information may be given by higher departmental supervision.

2. Introduction to new employee's supervisor.

3. Departmental rules and regulations, tour of department.

4. Departmental facilities.

5. Job—duties, standards, hours, salaries, workplace, use and care of office machines, etc.

6. Introduction to fellow employees—the relation of their jobs to new employee's.

This may include assignment of new employee to sponsor with whom the new man may feel freer to talk and ask questions.

B. Follow-up interview.

May substitute for or supplement employment department follow-up and may be conducted by higher supervision or staff assistant.

1. Company history, development, products, policies, etc.

2. Employee benefit plans, etc.

3. Terms of employment.

4. Company and departmental rules and regulations, etc.

5. Job—duties, standards, etc.

6. Tour about the office.

It is evident from the foregoing that it would be difficult to define the precise points at which the induction program starts or ends. Likewise, the period of time over which the process extends—the so-called "spread" of the induction—cannot be delimited. In the fullest sense, the introduction to the job may be said to begin when the applicant presents himself for the initial interview and is given some facts about the work. Normally, it may be considered as finished when the employee has had sufficient time to digest the required information and to apply with a reasonable degree of success what has been learned.

Types and methods of employee training. Three principal kinds of employee training methods are commonly found:

First, there is training for new employees. Such work consists primarily of instructing the new employee specifically regarding the nature of the work to be done and the way in which it is to be done. Second, there is promotional training, which is designed to train present employees for the job ahead. Third, there is employee training of a more general nature, which is usually given to supervisory and executive forces.

There are various methods utilized in the training of clerical employees. One method which is named on the basis of its use in industrial training is vestibule training. Generally, this is off-the-job skill and information training involving factors that most nearly approximate those found on the job. The actual job duties are demonstrated and practiced under a planned program.

The conference method is frequently used to present portions of supervisory and executive training programs.

Lecture courses are the least desirable for training purposes but under certain circumstances, caused by subject matter or size of the employee group to be instructed, may be expedient.

In addition to the three principal kinds of training outlined above, a number of companies use other training devices such as coöperation with outside educational institutions, instruction manuals, house organs, and employees' papers. Training by the use of such methods, however, usually supplements the other more definitely organized methods already mentioned.

Points to be considered before starting employee training. Regardless of what kind of training is to be given or whether, as is sometimes the case, a company deems it advisable to give all three types, there are certain matters of policy and procedure that must be decided before a start can be made.

First, there is the question of attendance. Shall attendance by employees be voluntary or compulsory? Shall the classes be conducted on company time or on the employee's time? Voluntary attendance on the employee's time, or compulsory attendance on company time, comprise the usual combinations in use.

Second, there is the question as to the nature of the work to be given. Shall the content of the courses be general or specific? For example, a company may decide to give a course in business correspondence. It is apparent, however, that before the content

of the course can be planned, a decision must be made as to whether the material is to deal chiefly with the principles of business correspondence, or whether it is to be based largely on the correspondence problems of the particular company. Similarly, in planning a course in bookkeeping and accounting, a decision must be made as to whether the course shall consist largely of the theory of double-entry bookkeeping and accounting, or whether the various accounts and specific procedures of the company are to be used as a basis.

Third, there is a question of who shall give the course of instruction. Shall company executives conduct the work, or shall outsiders (frequently teachers in local educational institutions) be engaged for the work? In this connection it is worthwhile to remember that company executives may know the work of their respective departments exceptionally well but may not have the ability to explain it clearly to others. Moreover, there is always the question of whether the employees taking the course will not perhaps feel that the executive is assuming a good deal in the way of experience and knowledge when he attempts to "lecture" to others about it. On the other hand, no outside teacher, no matter how experienced or competent he may be, can possibly know the peculiar problems and details of the company's operation in the way that the executive knows them.

Fourth, there is the question of possible coöperation with existing educational institutions. In cases where classes in various business subjects are already being given by schools or colleges of recognized standing in the community, some companies do not attempt to duplicate such work for their own employees but merely make arrangements whereby employees may enroll in certain classes as special students, the company sometimes paying a share of the tuition fee.

Fifth, if a company establishes a number of employee training courses in different subjects, the content of each course must be carefully worked out. There must be no overlapping in subject matter; rather, it should be coöordinated. For example, assume that a company is giving a course in stenography to typists, and that in the same organization a course in business correspondence is being conducted. The question immediately arises as to how much business English should be given in the stenographic class. This is especially likely to be a problem if all stenographers are urged to take the course in business English, in order that they

may be able to write better business letters, and also to qualify themselves for positions as private secretaries.

Training new employees for their initial work. The problem of training new employees for their initial work involves considerable study. Training, to be useful, must be a planned technique of imparting skills and useful knowledge to people.

The modern techniques still adhere to the tried formula of "tell the employee, show the employee, have the employee do the job or operation, and check him and correct him." However, in addition, it is now understood that the office worker should know the purpose of his assignments and their relationship to other work in the organization. Skillful supervision begins with skillful training and the new employee will perform much more effectively if steps are taken in his training to point out to him the relative importance of the several components of his job.

Another phase of training is based upon job methods. A course of training for the new employee should embrace instruction in the best arrangements of physical facilities for the performance of the work.

Industry has made extensive use of time and motion study, which is designed to determine the simplest and most economical manner of performing a given job. In training the new employee in the office, it is equally important that he be instructed in the use of the simplest and most effective motions and work flow. Similarly, the timing and rate of speed at which given motions or steps of the job are performed are important. If standards are determined, the training of the new employee for the attainment of effective speed is simplified.

Industrial training emphasizes the gains in elimination of spoilage and waste through training. Accuracy and the elimination of errors that are equally uneconomical in the office operation should be stressed as the final phase of training for the new employee. Instruction throughout should point out the need for accuracy and should indicate where such accuracy is essential.

Promotional training. The second principal type of training for office employees is promotional training. As the phrase indicates, it is designed to train present employees for the job ahead.

Various methods of promotional training are used. Courses in specific company procedure covering such activities as bookkeeping, order handling, and secretarial work may be made available to

present employees who are in beginners' positions, doing mail and messenger work and general clerical activities. More general courses in such subjects as business English, salesmanship, accounting, traffic management, and credits and collections may be given by the company or offered to employees in coöperation with established educational institutions.

One of the most frequently used methods of promotional training is the understudy plan, whereby selected individuals are placed in key positions as assistants to department heads and executives. The executive makes it his business to see that the assistant has full opportunity to learn all about his work. Periodic discussions may be held at which the executive explains the reasons why present procedures exist and why certain decisions were made in a particular way. After the assistant is thoroughly trained and experienced, he is promoted either to the position which he has been understudying or to another of equal importance in the company.

Employee training, Metropolitan Life Insurance Company. The Metropolitan Life Insurance Company is a leader in the field of job and promotional training for office employees. Because of this, in addition to the fact that the nature of its business is such that practically all employees, aside from the field force, are clerical workers, the methods of this company offer an excellent illustration of what may be included in a comprehensive training plan.

All training courses for office employees are given on the employees' time after office hours and without charge to the employees. Among the courses offered are the following:

*Typing.* Both group and individual instruction are given in touch typing.

*Stenography.* Special attention is paid to rapid and accurate transcription of notes, and special attention is given to proper punctuation, neatness, setup, and so on.

*Dictaphone.* Students are required to transcribe, on the typewriter, previously used cylinders. This training is given on the job with due consideration to spelling, punctuation, general neatness, and so on.

*Business machines.* Classes are held in calculating, key punch, and tabulating machine operation.

*Principles and practices of life insurance.* This class covers such subjects as tables of mortality, premiums, types of contracts, claim

settlements, group and industrial insurance, reserves and surrender values, selection of risks, treatment of sub-standard risks, the annual statement, investment of assets, internal organization, agency organization, insurance regulation and supervision, insurance laws, and history of insurance.

*Business English, elementary.* The elementary class is for those without previous formal training in business English. Particular attention is paid to grammar, syntax, and so on.

*Business English, advanced.* Admission to these classes is limited to those who have completed the elementary work, current enrollment being approximately 250. Emphasis is given to actual letter writing and composition.

*Actuarial.* For fifty years the company has maintained classes in mathematics and the actuarial science for the purpose of preparing students for the examinations given by the Actuarial Society of America and the American Institute of Actuaries. Identical examinations for the first eight groups of studies are given by both the Society and the Institute, and separate classes are conducted for the preparation for each of these examinations. Classes for Parts 1 to 4, inclusive, cover principally the mathematical processes.

*Transfer and promotion.* The principle of giving present employees the first opportunity to take positions involving larger responsibility and carrying a higher rate of pay than those which they are now holding is of course a well-established one. In order to put it into practice, however, it is necessary that there be available carefully worked out and detailed descriptions of every position in the form of job specifications, and that the records of the personnel be so arranged that the names of present employees who may be fitted for advancement may be readily available. It is also most important that a clear-cut distinction be made between a transfer and a promotion. The former word usually means merely a change from one position to another without an increase in the responsibility of the work and usually without an increase in pay. Promotion, on the other hand, means immediate advancement in responsibility and an immediate or subsequent increase in salary.

The so-called three-position plan of promotion represents the ideal method. Under it each employee—and executive—is not only doing his own work; at the same time he is both learning the job above him and training someone under him. In actual practice,

however, the adoption of such a plan obviously is not always possible. Furthermore, individual personalities necessarily play a most important part.

Further consideration will be given to the subject of transfer and promotion in connection with the discussion of salary standardization in Chapter 23.

### EMPLOYEE TRAINING, SWIFT AND COMPANY<sup>2</sup>

What Swift does can often be done on a smaller, but wholly similar, scale by smaller companies. For example, Swift employs 120 employee-instructors. A much smaller company could perhaps employ one employee-instructor. Swift uses more than a dozen types of training programs, each designed for a specific purpose. Employees may take a four-year course, or a two-day course. The training program for Swift office boys has been in effect for more than twenty years. Messengers, file clerks, junior clerks may enroll for a four-year course, which takes the form of weekly, one-hour meetings throughout the year. The first two years they are taught general background, a sort of bird's eye view of Swift's setup. The third year they are instructed in Swift's buying and selling methods, and the fourth year they are taught packing house economics. In all, they receive 160 hours of instruction. Coupled with daily work experience, this training program turns out a high type executive in due time.

**Executive and supervisory training.** The selection and training of individuals who in time will be capable of holding important executive positions is a matter to which business organizations have given a great deal of attention, particularly in recent years. It is now recognized more clearly than ever that it is both unsafe and unwise to rely on the mere chance of being able to find a qualified executive when he is needed. Progressive concerns today, therefore, besides taking definite steps to locate potential executive personnel long before there is a definite position available, are giving special attention to the training which those thus chosen shall receive.

It is important in this connection to consider supervisory training and development as the keystone of any long-term executive training program. Supervisory skills have become largely those of human relations and those of getting results through the effective direction and coördination of the work of others.

---

<sup>2</sup> *Industrial Relations Handbook*, edited by Aspley, J. C., and Whitmore, E., The Dartnell Corporation, Chicago & London, 1943, p. 312.

An interesting comment on this problem is provided by the following excerpt:<sup>3</sup>

So far as the exact content of supervisory training programs is concerned, there is considerable variation in subject matter and in the emphasis placed thereon. Any comprehensive program, however, should include consideration of these general areas:

Principles of organization: organization plan of the department concerned; the distinction between responsibilities and relationships of operating and staff departments.

Personnel administration: existing policies and their background; advance discussion of changes in policy; analysis and handling of complaints and grievances; and similar matters.

Cost control: proprietary viewpoint; purpose of accounts, analyses, records; budgetary control plan and procedure; types of expense and their control.

Quality control: principles of quality control.

Planning and scheduling: explanation of the whole system of planning and stabilization, from the top down, presented by those responsible.

The outstanding techniques employed to vitalize the supervisory training program are listed below. Companies have used them singly and in combination, and none of them is mutually exclusive:

1. Understudy method of on-the-job training, applied with adaptations to the various supervisory levels.

2. Conference method.

3. Modifications of the conference method, combining lectures, discussions, films, the case method of presentation, and other techniques.

4. Lecture method.

5. Reading assignments and distribution of pamphlets, manuals, policy bulletins, and other instructional material.

6. Field trips to other companies, and interdepartmental trips.

7. Membership in management associations and other professional groups, and attendance at periodic meetings and conferences sponsored by such groups.

**Executive training plans.** The importance of executive training and some of the methods used to select and train executives are outlined in the excerpt below.<sup>4</sup>

Executives do not spring forth full blown. Neither are their talents solely the product of some inherent maturation process, requiring no external stimulation. Experience is fast teaching the fallacy of providing extensive training for employee and supervisory groups, while neglecting to cultivate the aptitudes and to enhance the performance of those who

<sup>3</sup> Holden, P. E., Fish, L. S., and Smith, H. L., *Top-Management Organization and Control*, Stanford University Press, Stanford University, Calif., 1941, p. 113.

<sup>4</sup> "How to Establish and Maintain a Personnel Department," American Management Association, 1944, p. 64.

are guiding the destinies of enterprise. As one executive so aptly says: "Business can no longer wait for leaders to happen—it must make them happen."

The all-round development of present and potential executives must thus be an objective of every well-balanced training plan. True, persons of executive caliber are usually self-motivated to increase their stature and competence; they evolve their own techniques for promoting their knowledge of people and processes. In fact, a small company with a relatively limited executive staff may have to rely heavily on the individual initiative displayed by its top men in making themselves better administrators and encouraging the development of promising members of the organization who must ultimately succeed them. However, as the size of the establishment increases, and with it the number of persons who must function in executive capacity, the advantages of more systematized efforts in this area are self-evident.

Plans of executive training and education are as varied as are the requirements of the companies for which they are designed. However, examination of the contents of a number of programs reveals certain suggestive features all or many of which are included in the individual company plans.

1. Objective methods are employed to identify individuals within the organization who give evidence of the capacity to attain standards set for the executive personnel. Such persons are earmarked for advancement in accordance with the organization's "promotional sequence" arrangement.

2. Colleges, technical schools, and similar institutions are canvassed to find young people of executive "timber." Upon graduation, the most desirable of these candidates are employed and are launched on a prescribed course of development over an extended period. This may involve a combination of on-the-job training in many or in all departments of the business, with classroom and other instruction.

3. For the continuous development of present executive personnel, regularly scheduled conferences are held to promote interchange of ideas, to discuss company policies and procedures, to consider industrial relations problems, etc.

4. Company schools offer carefully developed curricula for executive training to supplement the planned job experience, and coöperative arrangements are maintained with educational institutions whereby various types of related instruction are provided for the executive trainees.

5. Every senior executive has the responsibility of guiding the development of his understudy or subordinate executive. He delegates executive responsibilities of mounting complexity to this individual gradually, observes and evaluates the individual's performance, and gives counsel and constructive criticism.

6. All executives are encouraged or required to analyze their jobs so that they may better determine their particular strengths and weaknesses in relation to what is required of them and take steps to remedy any deficiencies in their personal equipment.

7. Company membership is maintained in professional management associations and reputable semi-private organizations which direct a flow of timely educational and technical reading matter to the executive group. Many such organizations hold periodic conferences, attended by executives from various parts of the country, at which information is shared and given. In addition, the librarian or some other member of the company personnel staff selects books, magazines, and other material for routing to executives.

## 22

### *Other Personnel Activities*

The office manager, acting in his capacity of chief personnel officer, is usually either directly responsible for, or vitally interested in, a wide variety of other personnel activities, in addition to the selection and training of office employees. These include such matters as free time allowances on account of sickness, vacations, and absence for other reasons; the company library; employee publications; insurance; pension plans; financial aids such as loans, Christmas clubs, and savings funds; and other employee activities, including cafeterias, suggestion systems, length-of-service clubs, and athletic associations. Each of these matters is discussed briefly in this chapter.

Free time allowances. For obvious reasons, every company pays its office employees a certain amount for which it receives no service in return. Tardiness, illness, vacations, and absence for personal reasons normally amount to at least 5 per cent of the time for which an employee is paid during the year. If proper care is not taken, this figure may be as high as 7 or 8 per cent. Thus for a company with an annual office pay roll of \$1,000,000, the loss because of lax methods may easily amount to as much as \$25,000 or \$30,000 a year. Viewed in this light, it is apparent that the establishment and administration of policies and rules covering free time allowances is no mere theoretical consideration but an important practical matter.

The National Industrial Conference Board conducted a survey among companies employing salaried office employees and found that of the more than two hundred companies reporting, while almost all had established definite policies, these varied with size, location and industry.<sup>1</sup>

---

<sup>1</sup> See National Industrial Conference Board Report on Personnel Practices in Factory and Offices, II, 1943.

**Tardiness.** Tardiness, particularly in reporting for work in the morning, is an ever-present problem in practically every office. The methods used for securing as high a percentage of "on time" arrivals as possible, however, vary widely.

In general it has been found that tardiness can be reduced by educational efforts. Penalties, such as docking, arouse resentment and do not always accomplish their purpose; offering a direct incentive for better attendance generally serves to improve attendance records; the choice of incentive depends to a large extent upon conditions peculiar to the individual employment situation.

The National Industrial Conference Board survey, taking cognizance of the tendency to establish positive practices which reward punctuality, found that of 284 reporting companies only 16 granted special awards for punctuality.<sup>2</sup>

*Time clocks.*<sup>3</sup> The companies which employ large numbers of wage-earners are more inclined to require clerical employees to punch time clocks than is the case among firms whose primary function is some type of office work. Among companies in professional service fields—insurance, advertising, management consultation—only 15 per cent use time clock records for clerical employees; among printing and hardware manufacturers the percentage rises to 80. This fact holds good whether companies are considered in relation to the size or the location of the community in which they are doing business.

In the entire group of contributors to this report, approximately two-fifths use time clocks for clerical workers. No doubt a factor which has had an effect on the situation is the general dislike of office personnel for this device. Those industrial relations workers who believe that the salaried employee's approach to employment is fundamentally different from that of the factory worker invariably mention this attitude as one of the distinguishing characteristics between the two groups.

**Sickness.** Practice varies widely with respect to the length of time for which an employee absent on account of sickness may be paid, either in full or in part. If there is a health insurance program in effect, which provides that an employee shall receive a stated amount after a given waiting period, usually at least two weeks, the company frequently pays the full salary for the first two weeks of illness, after which the employee is paid from the insurance fund.

<sup>2</sup> National Industrial Conference Board Report on Personnel Practices in Factory and Offices, II, 1943.

<sup>3</sup> "Working Conditions in 222 Offices," Report No. 542, The Dartnell Corporation, Chicago, 1946.

To illustrate the lack of uniformity and the diversity of plans, the Sick Leave Table which tabulates the results for 227 companies reporting in the National Industrial Conference Board survey is reproduced in Figure 71.

In dealing with the problem of absence due to illness, the office manager needs to guard particularly against two situations that are not uncommon. The first is the case of the sickly employee whose intentions and ability are above reproach but whose health is precarious. The obvious thing for the office manager to do in such cases is to secure the advice of a physician and act accordingly. If the company maintains a full- or part-time doctor, the matter can usually be handled satisfactorily through him; if not, competent outside assistance should be secured. While the cases of such employees are often distressing, it is clear that no company can be expected to continue in its employ persons whose health will not permit them to work with reasonable regularity.

The second type of situation, which merits constant watchfulness, is the employee who feels that he is "entitled" to a minimum sick leave every year. Such cases should be dealt with diplomatically but firmly and can best be handled by making it clear to the employee that payment for absence on account of sickness is distinctly a privilege rather than a right. A number of companies handle all such situations very satisfactorily by the employment of a full- or part-time nurse who calls at the homes of employees within a few hours after they report being sick.

**Vacations.** A usual practice is to give a two-week vacation to all office employees who have been with the company for one year prior to the beginning of the vacation period. Often, employees with less than a year's service receive one day of paid vacation for each month of employment prior to the vacation period. Some firms are more liberal, granting full two-week vacations with pay to all those employed prior to January 1. Most companies specify the period during which vacation must be taken, often June 1 to September 30, but here again a number of companies allow employees to take their vacations whenever they wish to, provided a satisfactory working schedule can be arranged.

There has been a distinct trend towards greater liberality in the matter of vacations. Many companies now allow employees to begin their vacations at the close of business on Friday, even though the office may be open on Saturday during the vacation

<sup>a</sup> One company pays for an additional two weeks at half pay; one company pays for additional time on an individual basis.

<sup>b</sup> One company pays for an additional month at half pay.

<sup>c</sup> One company pays for an additional twelve months at half pay.

<sup>d</sup> One company pays difference between Group Health Insurance and regular pay during the period.

Fig. 71.—Sick Leave Table.

period, thus in effect granting an additional half-day's vacation. More and more companies, however, especially in the metropolitan centers such as New York and Chicago, are either closing their offices entirely on Saturdays during the summer or operating with only skeleton staffs. In these centers, too, there is a growing tendency towards the five-day week throughout the year. Many companies allow employees to take an extra week's vacation, or even more, at their own expense. In some cases length of service, or a perfect attendance and punctuality record, entitles an employee to a paid vacation longer than the average.

The scheduling of vacations is often the responsibility of the office manager. The usual practice is to have each department head or supervisor work out the schedule for his own department. The particular time when each individual will be away may be determined by seniority or more often informally by lot among the employees themselves, with, of course, the approval of the supervisor. It then becomes the office manager's task to coördinate all vacation schedules and to keep the paymaster or cashier advised so that the necessary arrangements can be made for paying each employee before he leaves.

The Dartnell Report on Working Conditions in 222 Offices summarizes the practices found in 1946.<sup>4</sup>

*Vacation policies.* Approximately three-quarters of the clerical workers in the reporting companies receive a two-week vacation with pay after one year's employment. A tendency may be noted, however, among the other companies to use the vacation as an incentive or punitive device.

In the companies using vacations as incentives the length of time given usually increases in relation to the length of time the worker has been with the company. Here is a sample schedule of this sort, used by the Krey Packing Company:

1 to 5 years' service .....	1 week
Over 5 years' service .....	2 weeks
Over 15 years' service, women .....	3 weeks
Over 20 years' service, men .....	3 weeks

These schedules usually provide for one-week vacations at the end of one year, rising to two weeks at the end of two, three, or five years with the company. One of the most liberal policies is that of Columbia

---

<sup>4</sup> "Working Conditions in 222 Offices," Report No. 542, The Dartnell Corporation, Chicago, 1946.

University, which gives its clerical workers two weeks after one year, three weeks after two years, and four weeks thereafter. Another company awards vacation time on the basis of one day for each six months of service with a one-week minimum.

Most companies give no vacation at all to employees who have been with them less than six months, and prorate vacation time for personnel who have been in their employ more than six months and less than a year. A day for a month is typical of the organizations which have two-week vacations. In a few cases the vacation time is included in a general total with sick-leave time. One such plan gives a total of two weeks' sick leave, not cumulative, and one week of extended disability time, both of which are subtracted from vacations if they are used.

Two companies reported that their vacation policies included a provision for extra time as a bonus for regular attendance during the year.

**Other causes of absence.** In addition to tardiness, illness, and vacation, there are a number of other reasons why employees may be absent.

Members of the National Guard must not only do a regular tour of duty annually, but are of course subject to emergency calls as well. The annual service period usually comes in the summer, so that Guard members may spend their vacations in this way. Comparatively few companies allow employees time off with pay for National Guard duty in addition to their regular vacations. On the other hand, absence on account of emergency service is usually paid for.

Employees are customarily paid for the time they are absent on account of jury duty.

Illness or death in the family, weddings, and other personal matters also necessitate occasional absence by office employees. Unless the case is an unusual one that makes it necessary for the employee to be away for a considerable length of time, or unless an employee makes an unreasonable number of requests, the usual practice is to accept such absences as unavoidable.

**Overtime.** It was general practice, prior to the enactment of the Fair Labor Standards Act (Wage and Hour Law), not to pay office employees for overtime work on the grounds that they received paid vacations and were not docked for various absences just discussed. It was felt that this and other benefits differentiated between the hourly worker and the salaried employee. However, the fact that the Wage and Hour Law embraces many office employees and that the hourly employee has gradually obtained many of the benefits which were solely those of the office employee have

brought about major changes in overtime practices for salaried employees.

Although a commentary on overtime practices follows, the author calls to the attention of the office manager the absolute necessity for conformance to the requirements of the Federal and State Wage and Hour Laws which obtain in the case of a particular company.

In 1945, the Commerce and Industry Association of New York, Inc. conducted a survey of clerical personnel practices. Two hundred and fifty-five companies were polled and the four tables in Figure 72 indicate the variances between practices.

#### OVERTIME PRACTICES

Fig. 72.—Overtime Practices?

In many cases, however, office employees receive supper money, provided they work a stated length of time, usually at least two hours and sometimes three, beyond the usual closing hour.

The supper money payment is intended merely to reimburse the employee for the out-of-pocket expense he incurs by reason of eating in a restaurant rather than at home. If the employee lives at home or boards, such a payment accomplishes its purpose, with perhaps something to spare. If, however, the employee customarily eats at restaurants, then the payment of supper money represents a real saving to him. Some companies, especially those that operate their own employee lunch rooms for noonday meals, provide an evening meal free and consequently pay no supper money in cash.

The office manager should give particular attention to overtime and to payments of supper money for two reasons. In the first place, an unreasonable amount of overtime, particularly if it is long continued, not only hurts morale but also is indicative of improper organization. A department, whose normal operations require the services of ten people should have ten employees who work, for the most part at least, regular hours and not eight persons most of whom customarily work overtime two or three nights a week. In the second place, the office manager should guard against a situation developing in which an employee purposely attempts to supplement his regular salary rather materially by supper money payments. Cases have come to the writer's attention in which employees have added as much as 15 to 20 per cent to regular earnings by overtime work, some of which, at least, proved upon investigation to be quite unnecessary.

**The five-day week.** The Dartnell Survey previously referred to showed an interesting trend regarding Saturday work:<sup>6</sup>

The companies were divided about equally between those which require employees to work a half day on Saturdays and those which have adopted five 8-hour days as the work week. A definite relationship may be seen between the size of the community in which the company is located and its policy in this respect; in metropolitan areas of over a million population 71 per cent of the contributors close their offices on Saturday, while in the smallest towns only 55 per cent have such a policy. Equally definite is the relation between the area in which the company operates and the attitude toward a 5-day week. The East and South are approxi-

<sup>6</sup> "Working Conditions in 222 Offices," Report No. 542, The Dartnell Corporation, Chicago, 1946.

mately three-quarters committed to it, while only one quarter of the group in the West gives employees Saturdays off.

In general the question of Saturday work is not related to the type of business in which the company is engaged. Not unnaturally, however, it is organizations of the types which have direct personal relations with customers which most often offer the inducement of remaining open on Saturdays. Reporting banks, for example, were unanimous in requiring a 5½-day work week, and three-fourths of the retailers surveyed had the same system.

The use of Saturday work as a penalty for tardiness or absence was reported by a few companies, and several are using staggered systems of one sort or another. Under such arrangements, employees may work one Saturday a month, or every other week, to keep office open on a skeleton staff basis.

It seems a safe prediction that the trend toward abandoning Saturday work will continue, both for its effect upon morale and for the reduction in operating costs which it produces. Studies of the relationship of productivity to length of the working day have shown that unit output suffers as much from too short a work period as from too long sustaining effort. Office managers in companies with provision for a 5½-day week will usually admit that "not much gets done on Saturdays anyway." There is no question about the morale value of the 5-day week; employers in critical areas during the war found this a valuable inducement in hiring new personnel.

Although it has been pointed out that Wage and Hour Laws must be the determining factor, the office manager, for morale reasons, will find it helpful to keep informed on area and community practices. The Dartnell Report contributes the following on work-week practices:<sup>7</sup>

*Work week.* The 40-hour week is accepted almost unanimously as standard for clerical workers, according to the contributors to this report. A few companies work slightly longer, a few slightly shorter, periods, but the general pattern is built around the 40-hour system.

Of course, a wide variation is possible, and does occur, in the arrangement of the work week. There is a definite tendency, for instance, for the working day to start and end earlier the farther west the company may be; only one third of the eastern companies begin work at 8 a.m., while nearly two thirds of the west coast companies do so. More than a quarter of eastern organizations open their offices at 9 a.m., but only 5 per cent of the western companies start this late.

Earlier hours are also typical of smaller communities. Three companies in cities of under 10,000 population reported work days starting at 7 a.m., and more than half of this group is at work by 8 o'clock,

<sup>7</sup> "Working Conditions in 222 Offices," Report No. 542, The Dartnell Corporation, Chicago, 1946.

while not a single small-town company begins as late as 9. At the opposite extreme, nearly a quarter of the organizations in metropolitan areas begin work at 9, and two reported a work day beginning at 10.

National averages, however, are concentrated in two main groups—8 to 5 and 8:30 to 5. Nearly half of the reporting organizations use one of these periods as the work day. A great majority, too, begin and end the day on the hour or half-hour.

**Lunch periods.** In considering the work week it will be well if the company studies the matter of the time and length of lunch periods. Such periods now differ and most often fall between a half hour and one hour. There are isolated cases where either less than a half hour or more than one hour are granted. The lunch period should be governed by the nature of the work week, the nature of the work performed, the community eating facilities, and, of course, whether or not the company provides cafeteria service.

**Rest or relief periods.** One practice which has spread from the factory to the office is the assignment of morning and afternoon rest periods. Here again, such practice will be governed by the conditions found within a given company. Where the clerical work performed is of a monotonous nature, rest periods have proven effective in increasing the rate of productivity in the office and in reducing errors. Under certain circumstances, the granting of such periods which can be scheduled and controlled reduces unofficial rest periods taken by the employee. A good many companies have resolved the matter and assign ten- or fifteen-minute morning and afternoon rest periods for the office staffs.

**The company library.** Office management has found that not only direct training but steps which are generally aimed at improving the level of education and diversion for the employee are worthwhile in terms of improved employee relations and employee morale.

A company library can contribute to the knowledge of the employee and can be integrated into the employee services program. On the average, less than half of the companies employing office workers maintain their own employee or company libraries. However, the number is on the increase.

If a company has a well-organized research or statistical department, the company library is often an important part of it, and the librarian may report directly to the department manager. However, there are many cases in which the office manager is the responsible executive.

Company libraries almost always contain technical and semi-technical books and current periodicals having to do with the industry or line of business in which the company is engaged. In addition, many have a diversified assortment of general books on such subjects as history, travel, literature, and biography. Some have current popular magazines, and a few libraries have fiction. The total number of volumes may range from 5000 to 50,000; the annual operating cost, including book purchases, from \$3000 to \$20,000 or more; and the number of employees from one to as many as ten.

The Armstrong Cork Company maintains a circulating and reference library of about 5,000 books and periodicals with a librarian and assistant librarian in charge. The books consist largely of technical and biographical works and those on industrial relations subjects. Approximately 800 books and magazines are circulated each month.

Many companies like the Armstrong Cork Company have maintained libraries for many years. The method of organization and operation differs from company to company. In some instances the employees have been permitted to set up lending libraries run by themselves on a mutual and coöperative basis. This has been done where the number of employees is small.

In other large companies the organization and operation have been put under the charge of experienced librarians expressly employed for the purpose. Many large cities through their public libraries make it possible for companies to establish a branch in the company offices.

**Employee information.** There are many reasons why informing employees is an important phase of any employee relations program, but the basic purposes are to promote the best possible public relations and to achieve maximum efficiency at lowest cost.

No company today is sufficiently independent so that it can ignore the public relations factor. The employees of a company can easily be the heart of any public relations program. This is particularly true of local companies and of companies in smaller towns and cities where community relations and employee relations are almost one.

Most employees want to be proud of the organization for which they work. If they can be told what the aims and purpose of a company are and believe that these are worthwhile, they are only

too willing to pass their beliefs on to their friends, relatives, and all of the public with which they come in contact. Service organizations such as airlines, railroads, and express companies have long realized this and have done their best to "sell" the public through their employees. For public relations purposes it is important to let the employee know what you are trying to accomplish, why it is a useful goal, and what part he can play in it.

The second reason for informing employees is to achieve maximum efficiency at lowest cost. All of those things which contribute to good public relations are tied into good employee morale. As such, good morale brings about efficiency and low costs.

Employees usually want good leadership, recognition as individuals, and knowledge in advance about changes that will affect them. How well they are informed governs the degree to which these requirements are met.

The methods that can be used in informing employees are:

1. Supervisor's personal contacts with employees.
2. Staff interviews.
3. Group meetings.
4. Memoranda or letters.
5. Bulletin boards.
6. House organs (magazines or newspapers).
7. Employee manuals.
8. Annual or periodic reports to employees.
9. Public address systems.
10. Visual aids (slide film, motion pictures, posters).
11. Outside publicity (newspaper and magazine).

Supervisor's personal contacts with employees. The point at which management has fallen down most often is in its failure to stress the importance of the supervisor's function in informing employees. All of the other instruments for informing employees should be subordinated to the supervisor's responsibility for telling the employees all that they ought to know. As a matter of fact, the other devices are very often excuses for failure to provide the supervisor with the information he needs and, in turn, are excuses for his failure to inform employees. In a word, the key to an employee information program should be the supervisor. He should be well informed and should know what the other methods of informing employees are, when they are to be used, and what they are to say.

If this fundamental is recognized and accepted, the other devices

can be looked on as accessories and can be useful in strengthening an employee information program. Too often we inform groups of employees and forget the individual. The supervisory contacts are important since the supervisor works with the individual.

*Staff interviews.* One major function of the interviewer in any personnel organization should be to give information. Usually in the induction procedure previously outlined we find the use of a staff interview. At the least, the employee is informed in such an interview about pay, hours of work, benefits, and chances for advancement.

*Group meetings.* Most often the employee attends a group meeting as a part of an orientation or induction program. Here he may be told about getting to and from work, eating facilities, absences and latenesses, locker and washroom information, medical services, miscellaneous rules and regulations, place in the organization, and more about benefits and policies.

*Memoranda or letters.* The new employee may receive a letter of welcome from a company official or an informative memorandum which tells him specifically the terms and conditions under which he has been employed and which at the same time welcomes him. Some companies send such letters to the home as soon as the employee is signed up. The personalization of such letters is important. If they are to be sent, care should be taken in not overdoing the tone of them and in making certain that names and addresses are correct, since sloppiness can do more harm than good.

*Bulletin boards.* Many companies place bulletin boards so that it is necessary for the employee to pass them on going to his work place, to lunch, and on going home. Unfortunately, most companies use bulletin boards as isolated catch-alls. If they are to be used, attention should be given to their layout. They should be placed so that all employees must pass them, and they should be kept up to date and integrated into the over-all employee information plan. One company occasionally puts teaser items on the boards, such as bulletins announcing, for example, that if the employee will call or write in he will be allowed to order some special item. This keeps reader interest up, as does the calendar of company events which the employee learns to rely on as his guide to company activities.

*House organs.* In issuing such employee publications, it is important, to avoid achieving more harm than good, to conform to good editorial standards, to avoid over-editorializing, and yet to achieve good company relations by using news stories and by making

the house organ more than a gossip sheet. If it can be written by the employees, so much the better; but obviously it must be controlled by a proficient editor who can achieve desired ends through an employee staff. For example, skilled editors feel the best way to promote the security and benefits of a retirement plan is to run a well-handled, well-illustrated story of the happy lives of pensioners, with liberal use of testimonials. The employee generally wants a house organ of and for the employee.

Most large companies are resorting to the house organ as an effective means of informing employees. The primary purpose of the house organ is to build employee morale and foster better coöperation between the company and its employees. The best way to get coöperation in the office is to make each employee feel that he contributes to its success. The same rule, handled by a skillful editor, will work in editing the office publication. A message from the president has its place, but so has a message from the office boy. The function of the office house organ is to help stimulate a spirit of fellowship and coöperation, a realization of the common ends to be met by the organization as a group.

Employees' publications must be human if they are to be successful. Contents will vary with the business of the company; details of make-up, typography, and general features will follow largely the likes of the editor, but if the editor appreciates the importance (to himself) of each individual employee, and the importance to the company of welding the group into an harmonious whole by catering somewhat to their individual likes, the house organ can be a power for good beyond the dreams of its best wishers.

Readers' interest depends to a great extent on the physical appearance of the publication. It must present a clean-cut, business-like appearance, free from mechanical errors. Nothing kills interest more quickly than slovenliness in composition or printing. Poor cuts or paper, and typographical errors, will ruin the best of reading material. No matter how interesting the material is, an attractive and readable appearance is necessary. It is also well to bear in mind that house-organ readers are busy people. This fact has a direct bearing on the appearance of the publication, for if a businessman picks up a house organ that is large or thick, he generally lays it aside until he has more time.

Employee manual. Such manuals usually give the employee information on the history, aims and purpose, and organization of the company and of the working conditions, benefits, practices,

*Determining amount of life insurance.* Life insurance is payable for death for any cause. The amount of insurance may be determined in several ways. It may be based on salary classification, or it may be a flat sum for each employee.

Figure 74 shows that under the forty plans that graduate life insurance on the basis of employee compensation, the average plan provides a death benefit of approximately one year's pay. Under the ninety-four plans which grant the same amount of life insurance to all employees, nearly three-fourths provide a death benefit of \$1,000.

*Employee contributions.* If the employee contributes to the cost of life insurance, the maximum employee contribution may not exceed 60 cents per \$1,000 per month under the standard table and up to 80 cents per month if the industry is hazardous or there is a large proportion of Negroes in the group covered.

*Termination of coverage.* The insurance of any employee automatically terminates when his employment ends.

*Group accident and sickness insurance.* Group accident and sickness benefits perform a valuable function in industrial life today. They provide the worker with financial protection against the loss of income because of disability. According to insurance underwriting regulations, the eligible employee is entitled to disability benefits when he is incapable of performing his duties because of illness or non-occupational accident. The employee need not be confined to the house because of his disability but must be under the care of a physician.

The minimum number of employees which may be included in a group contract varies somewhat. In some group companies the minimum may be as low as twenty-five, but a more common practice is to require a minimum coverage of fifty lives, the same as for life insurance. If the plan requires employee contributions, at least 75 per cent of those eligible must participate. If the minimum coverage is less than fifty, an even higher percentage of participation is required, according to the regulations of some insurance companies.

*Benefits.* The maximum weekly benefit allowable by the group companies depends on the amount of insurance underwritten, or upon the number of lives covered, or upon the industry. The largest benefit that any insurance company will underwrite is \$40 a week. If the employees are grouped by earnings classes, the benefit may not exceed a stipulated percentage of the compensation. For example, under the revised regulations of one insurance company the maximum benefit in any class may not exceed one-half of the maximum classification in the class, or three-fifths of the minimum in the class, whichever is less.

*Nature of disability.* Under group accident and sickness insurance, benefits are given for temporary or permanent total disability resulting from sickness or nonoccupational injury. Self-inflicted injuries are excluded from benefits. Insurance companies also exclude injuries received in connection with military or naval organizations in time of war or riot, or while performing police duty as a member of any military or naval organization.

two forms: (1) noncontributory plans, under which the employer pays all the premiums; and (2) contributory plans, under which the premiums are paid jointly by employer and employee. Under contributory plans the employer is responsible for the collection of employees' contributions.

Under the noncontributory type, all employees in the classes covered are automatically insured upon the effective date, or upon completion of the specified probationary period if actively at work on that date. If not at work, employees are usually not covered until their return to active employment, but in the case of group life this requirement is generally waived if the group covers more than 500 employees.

Under the contributory type, employees are not covered until they have signified their intention to join the group and have given the employer authority to deduct their share of the premiums from their earnings. Employees absent from work on the effective date of the policy or upon completion of their probationary period are not eligible to join until their return to active employment.

*Miscellaneous provisions.* Although permitted by law, medical examination of employees or other evidence of insurability is not required by insurance companies, except for employees who do not apply within the time limit set for applications under the contributory plan, or who elect to participate again after previous termination of insurance while remaining in the eligible classes. In no case may benefits for employees be paid to the employer.

The group policy is continued in force until its first anniversary and is renewed annually. If, however, on any premium due date the group covered is less than the number or percentage required by the insurance company, or the employees are paying a higher scale of premiums than stipulated in the contract, the insurance company may terminate the policy thirty days following written notice of termination.

These regulations apply to all forms of group insurance.

*Group life insurance.* Life insurance was the first of the group insurance benefits to be created, and early gained widespread acceptance by industry, for the need for some such protection was manifest.

#### AMOUNT OF LIFE INSURANCE UNDER UNIFORM AND GRADUATED BENEFIT PLANS

Fig. 74.

*Determining amount of life insurance.* Life insurance is payable for death for any cause. The amount of insurance may be determined in several ways. It may be based on salary classification, or it may be a flat sum for each employee.

Figure 74 shows that under the forty plans that graduate life insurance on the basis of employee compensation, the average plan provides a death benefit of approximately one year's pay. Under the ninety-four plans which grant the same amount of life insurance to all employees, nearly three-fourths provide a death benefit of \$1,000.

*Employee contributions.* If the employee contributes to the cost of life insurance, the maximum employee contribution may not exceed 60 cents per \$1,000 per month under the standard table and up to 80 cents per month if the industry is hazardous or there is a large proportion of Negroes in the group covered.

*Termination of coverage.* The insurance of any employee automatically terminates when his employment ends.

*Group accident and sickness insurance.* Group accident and sickness benefits perform a valuable function in industrial life today. They provide the worker with financial protection against the loss of income because of disability. According to insurance underwriting regulations, the eligible employee is entitled to disability benefits when he is incapable of performing his duties because of illness or non-occupational accident. The employee need not be confined to the house because of his disability but must be under the care of a physician.

The minimum number of employees which may be included in a group contract varies somewhat. In some group companies the minimum may be as low as twenty-five, but a more common practice is to require a minimum coverage of fifty lives, the same as for life insurance. If the plan requires employee contributions, at least 75 per cent of those eligible must participate. If the minimum coverage is less than fifty, an even higher percentage of participation is required, according to the regulations of some insurance companies.

*Benefits.* The maximum weekly benefit allowable by the group companies depends on the amount of insurance underwritten, or upon the number of lives covered, or upon the industry. The largest benefit that any insurance company will underwrite is \$40 a week. If the employees are grouped by earnings classes, the benefit may not exceed a stipulated percentage of the compensation. For example, under the revised regulations of one insurance company the maximum benefit in any class may not exceed one-half of the maximum classification in the class, or three-fifths of the minimum in the class, whichever is less.

*Nature of disability.* Under group accident and sickness insurance, benefits are given for temporary or permanent total disability resulting from sickness or nonoccupational injury. Self-inflicted injuries are excluded from benefits. Insurance companies also exclude injuries received in connection with military or naval organizations in time of war or riot, or while performing police duty as a member of any military or naval organization.

Benefits may be given for pregnancy, but the maximum number of payments for this disability is limited to six weeks. Out of 149 plans providing disability benefits only eight exclude pregnancy benefits.

It will be observed from Figure 75 that in the majority of the plans with flat-sum payments the weekly benefit is either \$10.00 or \$10.50. The amounts under other uniform-benefit plans vary from \$8 to \$21 a week, with eighteen plans providing a benefit of \$14 a week or more.

Under plans that graduate benefits on the basis of compensation, the employees are divided into earnings classes and, within specified income limits, receive the same benefits. The more earnings groups there are, the greater will be the possibility of providing the same proportion of compensation as benefits for all employees. With only two or three earnings groups, the ratio of benefits to compensation will be considerably higher for some employees than for others.

To arrive at some conclusion as to the relation of the disability benefits to compensation, the plans were analyzed to discover what benefits the employee would receive at specified wage levels. The results of this analysis are shown in Figure 75.

*Hospital and surgical benefits.<sup>19</sup>* A significant recent development in the field of insurance has been the tremendous growth of hospital benefit plans. Only ten years ago this type of insurance was practically non-existent. By 1944 approximately six million persons, including employees and their dependents, were eligible for hospitalization benefits under group policies underwritten by leading insurance companies. The Blue

<sup>19</sup> Adapted from "Company Group Insurance Plans," National Industrial Conference Board, Inc., 1945.

Cross plans, under the sponsorship of nonprofit organizations in coöperation with local hospitals, cover about 17 million people. In all, approximately 23 million Americans are protected financially against hospital expenses, or about one out of every six persons.

Surgical benefits are provided for 4.3 million employees under 17,600 group insurance contracts.

*Minimum coverage.* The minimum coverage for group hospital and surgical benefits underwritten by most insurance companies is fifty lives, or 75 per cent of the eligible employees, whichever is greater. If benefits are available for dependents, at least 75 per cent of the eligible employees who have dependents must accept benefits for their dependents before the coverage becomes effective. An employee must be insured to subscribe for dependents' benefits.

*Hospital benefits for employees.* Three-fourths of the new group insurance plans studied contain provisions for hospital benefits. This part of the group insurance program is more uniform than most other forms of insurance coverage.

*Room-and-board benefits.* Upon confinement to a hospital, members of the plan are eligible for a specified amount of room-and-board benefits. The daily hospital benefit is an insured amount rather than a form of reimbursement and is paid regardless of the actual cost of the services. The minimum hospital benefit underwritten by insurance companies varies between \$6 and \$8, depending upon the regulations of the carrier.

It will be observed from Figure 76 that 85 per cent of the plans analyzed provide for a uniform, or flat-sum, benefit for all covered employees, regardless of their earnings, rank, or sex. This daily payment ranges from \$3 to \$6, with benefits of \$4 or \$5 a day appearing most frequently. In the remaining 15 per cent of the plans, hospital benefits are graduated on the basis of the employees' compensation. In isolated instances, the benefits are larger for executives than for the general employees or are higher for male than for female employees.

This discussion cannot cover all phases of group insurance. Medical reimbursement and special surgical benefits plans are available on a group basis. Competent assistance and recommendations can be obtained through qualified insurance companies.

#### RETIREMENT PLANS<sup>11</sup>

Once an employer decides that he wants to adopt a retirement plan he faces an almost infinite number of choices. He can effectively simplify his problem by making a series of basic decisions.

The first, and the one from which all others will of course flow, is a decision on what he wants his pension program to do.

Does he want to provide retirement benefits for all of his employees, or only for those making more than \$3,000 a year whose above-\$3,000 earnings are not counted under federal social security?

<sup>11</sup> "Industry Plans Pensions," *Business Week*, April 22, 1944.

Does he want the retirement age to be fixed or flexible?

What level of retirement compensation does he want or, conversely, how much is he prepared to spend?

Does he want the program to be financed by joint employer-employee contributions?

Is the income of his enterprise sufficiently stable to allow for regular, flat commitments, or does he want to build a pension fund out of profits and keep his contributions highly elastic?

The firm that adopts a canned program is courting trouble. Students of pension planning agree on few things beyond the fact that each com-

pany presents a different problem because the factors which must be considered show up in differing relationships.

*Help for pension planners.* A natural tendency for the firm considering pension planning and thinking of it as a financial or insurance problem is to turn to a bank or an insurance company for assistance. Bank or insurance company representatives, usually with special training in pension problems, will, when called in, begin by discussing general pension theory so that the client gets a background in the subject.

*Selecting a plan.* The next step—in which the insurance company or bank representative, and the firm's attorneys together participate—is tentatively selecting a plan and drawing it up. It must then be checked and rechecked (by all those responsible) until a final draft, ready for submission to the stockholders, employees, and Bureau of Internal Revenue, is prepared.

*Four broad choices.* In the main, pension plans fall into four general classifications, depending on the way they are financed. They are: (1) the group annuity type; (2) the trustee plan; (3) the individual policy trust program; and (4) some combination of these three basic forms.

Under a group annuity system, an insurance company enters into a master contract with the employer and provides employees (a minimum of fifty persons, and at least 75 per cent of the eligibles) with group pension coverage based on their earnings, age, and sex.

Under the trustee plan (sometimes called self-administered), an employer creates an irrevocable trust and the trustees invest the accumulated funds in securities. The employee looks to the trust for his benefits, rather than to an insurance company. U. S. Government bonds are the commonest investment today.

The individual policy trust program is similar to the trustee plan except that in this instance the trustee is instructed to invest the accumulated money with an insurance company in individual insurance policies. These policies on the life of each participant are of exactly the same type as the employee would buy as an individual from the insurance company, but they are owned and held by the trustee as long as the employee remains in the service of the company.

*Combination systems.* There are many combination forms which weave suitable features of each of these types into a general employee benefit plan.

*Stock bonus or profit-sharing plans.* These are sometimes designed to pay benefits in the form of retirement income. Under these schemes, a firm puts a certain amount of its profits into a fund (perhaps for the purchase of the company's common stock), and this money and its earnings are paid out to the employees in accordance with a plan previously announced.

*When to retire.* The usual age for retirement is 65, although women sometimes are retired at 60.

*Determining benefits.* The prevailing idea on the extent of benefits favors a level which will provide the retired employee from one-quarter to one-half of his average earnings, either exclusive or inclusive of social

To gain ideas that will directly benefit the company and its operations.

To improve management-worker relations and give both a whole new picture of cooperation.

In inviting the worker to make suggestions on that phase of the business with which he is most cognizant—primarily his own job and his surroundings on the job—you are in effect asking him to lend a hand in planning plant or store processes and procedures. And you are providing him with a channel so he can go right to the "topside" with his ideas.

The elements of an employee suggestion system are four:

1. Some way—for instance a suggestion box—to solicit and obtain ideas from employees in your organization.
2. Some way—usually through a committee of management and workers—to evaluate these ideas.
3. Some way to provide suitable recognition for ideas that are accepted and suitable explanations for those that are not.
4. Some way to follow up to see that good ideas are put to use, either immediately or whenever changing conditions make them applicable.

**Other personnel activities of a financial nature.** A problem common to all office organizations, and one with which the office and personnel manager must often deal personally, is the matter of requests by employees for temporary loans. Because every right-thinking businessman wants to do what he can to discourage loan sharks and others who prey on the misfortunes of respectable people, there is often a tendency to be rather lenient when such requests are made. On the other hand, experience shows clearly that unorganized lending of company funds may result in unwarranted losses.

In general, two methods of handling the employee loan problem are in use. One is to make such loans available to employees under a definite set of rules which apply in all cases. The primary requisites of such a plan are the determination of the need, a fixed maximum amount to be loaned, based in part perhaps on each employee's salary, and a definite arrangement for liquidation of the indebtedness over a given period of time. The other method, which has found increasing favor in recent years, is based on an arrangement between the company and a bank or responsible personal loan company under which employees may borrow money on their own notes without the necessity of securing other co-makers. In such cases the company does not guarantee the loan, but merely informs the bank that the applicant is a regular employee earning a certain salary.

A few companies coöperate with their employees in financing home purchases, especially in cases where the company is the principal business establishment in the community. Here the arrangement is usually quite similar to that which the borrower would ordinarily make with a bank or building and loan association.

### CREDIT UNIONS<sup>12</sup>

Minor in character, but nonetheless genuine, are the financial emergencies confronting workers who wish to purchase automobiles, household appliances, and other durable consumer goods. The company credit union, operating under either a State or Federal charter, is a device by which such financing needs can be met inexpensively and without the dangers which occur in dealing with unscrupulous lenders.

A credit union is fundamentally an association of persons with some interest in common for the purpose of loaning one another money. People who are employed by the same company, belong to the same church, or live in the same area, may form a credit union. A member who is prosperous may deposit funds in the organization; members in need of help may make either unsecured or collateral loans, paying 1 per cent interest on the unpaid balance each month. The low interest rate resulting from the lack of administrative expense—funds are administered and loans approved by committees drawn from the membership—and the comparatively high return on savings, which on the average has been about 3 to 4 per cent, have made the credit union increasingly popular. The number of these associations in the United States nearly doubled between 1936 and 1940 from 5,437 to 9,150.

The present study is another indication of the growth of this movement. A 1935 survey showed that 11 per cent of the companies contributing had credit unions; in the group considered here, approximately one-third have them. If the smaller offices were omitted, the figure would be far higher; among airplane, farm equipment, and clothing manufacturers two-thirds have credit unions.

**Other employee services.** A number of companies make various other services available to their employees. Among these are lunch rooms and cafeterias; coöperative stores and other special purchasing arrangements, including discounts on goods made by the company; length-of-service clubs, such as the Ten Year Club, the Quarter Century Club, and so on; athletic associations; social activities, including singing and dramatic classes; the establishment of summer vacation camps; counseling services; and planned programs of music for employees while at work.

**Summary.** Collectively, personnel and welfare activities such as those discussed in this chapter form an important part of a complete personnel program. The existence or absence of any one of them may not greatly affect employee morale one way or another. Taken together, however, they comprise a group of activities to which progressive office and personnel managers are giving increasing attention.

## 23

### *Payment of Office Employees*

There is probably no single subject of greater interest to both the management and the employees than the matter of compensation. If salaries are too low, morale suffers, inferior work is produced, labor turnover increases, real costs of production are likely to be considerably higher than salary rates would seem to indicate, and purchasing power, upon which all business depends, suffers. If, on the other hand, salaries are too high, profits are not what they should be, with the results that the stockholders criticize the management and may turn it out.

In too many companies salaries paid are determined essentially as the result of a bargaining process between the management and the employee or applicant, the amount finally agreed upon being a compromise between what the management is willing to pay and what the employee thinks he should have. This is especially true in the case of office employees, who are not in a position to enforce their demands in the way that factory workers do, or at least do not care to do so. Furthermore, it is only within recent years that any widespread efforts have been made to measure the output of office workers.

Payment of office workers is a subject in which the office manager has an especially definite interest, not only directly because of his duties as personnel manager, but also because compensation is—and if it is not it should be—one of the office manager's principal functional responsibilities in all departments.

Office unions. There has been an increase in the unionization of office employees, and organizing efforts are being pushed. The subject of union relationships is a highly complex one and cannot be treated in a few paragraphs. Obviously, one employee requirement is equitable compensation, and office union organizers have been quick to point out what they term the generally low level of office salaries. They find disorganized salary practices within

companies useful in persuading employees to be represented by them for collective bargaining purposes. Most office unions feature in their campaign literature a demand for a higher minimum salary classification with guaranteed promotion and length of service increases.

The author believes that every office manager or individual charged with personnel responsibilities should be guided by adherence to the fundamentals of sound employee relations. These fundamentals, which are equitable pay, job security, opportunity to advance, recognition of the individual, and good leadership, should be the constant guide posts. The office employee in most cases enters into the job not to become categorized and fixed in a single position as does the average factory worker, but to advance on the basis of his individual contribution to the highest position for which he becomes qualified. Therefore, it is sound policy to develop for the office worker those policies which will permit the maximum chance for the realization of these democratic ambitions.

Need for scientific salary administration. It is evident that numerous injustices often result from a lack of adequate salary standards. Among the evils of such practice are: (1) inequalities in remuneration for similar work throughout a company; (2) improper relationships that often exist between the compensation of different individuals and their respective contributions; (3) salary adjustments based purely on seniority rather than on merit; and (4) the tendency of selfish department heads to oppose the transfer of employees whom they consider valuable.

Fundamental principles. The fundamentals that underlie the development of a sound and practical plan of scientific salary administration may be summarized as follows:

There should be (1) approximate uniformity in remuneration for the same grade of work throughout the company. (2) A logical relationship should be maintained between different grades of work and the respective remuneration for these grades. (3) There is a limit of remuneration for each job below which compensation would be unjust and unethical. (4) There is a limit or remuneration for each job above which compensation would be uneconomical, regardless of how well the work was performed. (5) There should be an opportunity for regular progression from the lowest to the highest limit of remuneration for a job and an opportunity for promotion to positions of higher grade at increased salaries.

It is realized that in almost every organization there is a small

percentage of clerical jobs that cannot be classified. Such jobs require creative imagination on the part of the incumbents. However, the vast majority of clerical jobs can and should be classified. The establishment of a maximum salary for an office job does not in any way stifle the initiative of the employee, but rather develops individuality.

### ORGANIZATION OF JOB CLASSIFICATION<sup>1</sup>

A job classification project may involve the participation of the employees whose jobs are being analyzed, their supervisors, special staff assistants, and top management. The planning, supervision, and coördination of the initial classification may be under the immediate charge of a staff executive. Previous experience in job classification work is helpful in organizing and directing the program. A special job classification or salary administration committee frequently coördinates the work and acts as a board of review on all original classifications. Such a committee usually includes the head of the job analysis staff, one or two chief executives, and the heads of the operating departments affected by the program. This committee determines the scope of the project, advises on alternative procedures, reviews the findings, and recommends salaries for final approval. The actual job description is usually worked out by a staff member in consultation with the individual worker and supervisor. Some companies, however, have had excellent results in the use of departmental committees composed of representatives of the employees, supervisors, and a staff man acting as secretary of the committee. The evaluation—grading or rating—is done by the staff in close consultation with line supervisors and executives or departmental committee; reviewed by the general classification committee; and finally approved by the chief executive.

The study of comparable jobs in the community and the compilation of "going rates" may be the responsibility of the staff. The coördinating committee usually reviews the results of the classification within the company in the light of community rates, recommends basic rates, and suggests the policy as to individual wage increases or decreases to bring present individual rates into line with recommended job rates. Final approval of basic rates and of any radical adjustments from the old to the recommended rates is usually the responsibility of a chief executive or of a joint negotiating committee.

*Steps in job classification.* The first step in any job classification program is to make a complete description of each job within the scope of the project. The job description provides the basic information from which (a) the job specification for the use of the employment office, (b) essential points for training, (c) lines of promotion, and (d) classification for salaries are developed. The methods for compiling the job

<sup>1</sup> Adapted from "Job Classification and Evaluation," a report by the Industrial Relations Section, Princeton University, April 1941.

descriptions vary from company to company. However, it is generally agreed that the employee and his immediate supervisor afford the best source of information about the job, that the analyst should observe the job rather than get his data from questionnaires or interviews away from the workplace, that the job should be described as it is now constituted, and that the completed description should have the unanimous approval of employee, supervisor, and analyst. It has been pointed out by many executives with experience in this field that employee and supervisory coöperation in preparing the job description is important not only in assuring an accurate basis for further steps in job classification, but also because it is at this step that the employees and supervisors form their favorable or unfavorable opinions of the program.

*Job evaluation.* There are two accepted methods of arranging jobs in the order of their importance. The first is that of ranking or grading. This may be done either by ranking the various jobs in order of their relative importance or by breaking them down into a few of their more important characteristics and then grading each from the highest to the lowest depending upon the relative importance of each characteristic. Although the ranking method is quicker, it is not considered the more satisfactory since it does not bring out how far one job is above or below the other. It is sometimes a first step towards rating or may be used as a temporary basis of evaluation until more accurate rating is possible. The rating method of job evaluation involves the breakdown of each individual job into its elemental requirements. Although the rating of certain jobs requires consideration of special and unusual factors, the following list is representative of the items commonly considered in establishing the relative status of a job:

"Skill factors (Includes dexterity, precision, versatility, and coöordination).

1. Education (School training)
2. Experience (Job training)
3. Judgment (Includes initiative and ingenuity)
4. Physical ability (Fitness)

Working condition factors

5. Hazards, discomforts, and personal expense

Responsibility factors

6. Equipment
7. Material
8. Personnel"

Other job requirements applicable to the individual job or company are frequently cited.

After the significant job factors have been selected, the range of numerical values is set for each factor. Just what the high and low points should be is a problem for the staff and committee to study and set out carefully. A specific numerical value is then given to each factor for each type of job, and the result is a rating scale with the

jobs listed from top to bottom according to their total number of points.

*Establishment of rates.* When the scale showing the jobs listed according to their relative point values has been completed, the next step is to convert these point values into dollars and cents. For this step, detailed information as to going rates in the community is necessary. Questionnaires have been used in salary surveys, but personal interview and observation of the job in other companies have proved much more successful since this procedure brings out in more detail the similarities and dissimilarities of the jobs. Full job descriptions and complete range of salaries are needed for the jobs being compared. After there has been a very careful study of this information, a chart may be set up to show quickly the range of community rates for the jobs which were studied. The averages of the salaries paid for specified jobs in other companies are plotted on the chart against the individual company evaluation points for comparable jobs. A similar chart may be prepared for the salary rates in relation to job values for the individual company; the two charts will reveal the disparities within the company and between company and community rates. Whether a company decides to reorganize its own scale and use the community level as a basis or merely to make a few changes depends upon the economic condition and the personnel policies of the individual company. However, most companies which have developed job classification as a basis for salary determination have announced a policy of paying at least the average rates paid for similar jobs in the community.

One question upon which there is considerable disagreement between companies is whether a job should have one definite rate or a range of rates with definite maximum and minimum limits. If the latter policy is accepted, a company must decide whether the range for one job should overlap into the range for the job immediately above and below. The leading factor controlling a decision to have a range in rate for one job is the desire to establish an incentive and to give some leeway for individual performance. A few companies feel also that it is well to permit some increase according to length of service. If a range is used, however, management needs to have some definite means of determining just where in the range the individual employee belongs in order to avoid all possibility of discrimination and favoritism.

Whether or not overlapping ranges are used depends upon the proximity of the quality differences of the adjacent jobs on the scale. Today the overlap is much more prevalent.

*Administration of plan.* When the initial job classification, evaluation, and rate setting have been completed, there remains the necessity of keeping a careful check on the established job descriptions and comparative rates. The same staff that set up the project usually oversees its maintenance. The coördinating committee has to keep abreast of new salary trends and be in a position to consult with the staff regarding any important changes. As in the original job classification, changes

in job structure affecting rates involve consultation with the employees and supervision.

*Necessity for periodic review.* In order to keep the job classification up to date, companies have found that it is necessary to make a complete review of the entire plan at regular intervals. Today these reviews are needed more frequently as new conditions affect the job structure. The partial breakdown of a skilled job may create one or more semi-skilled jobs which have to be described, evaluated, and placed in their relative positions in the scale. Great care may have to be taken to prevent disturbance of accepted job relationships.

The National Office Management Association has released a more specific clerical job evaluation plan.<sup>2</sup>

#### CLERICAL JOB EVALUATION

*Purpose.* The purpose of job evaluation is the equitable distribution of payroll dollars among all employees within a given group, or groups, in accordance with the effort and skill required and the responsibilities of each job performed by the group, or groups, under consideration. Only through the relation of each job to all other jobs within such a group can this be accomplished.

*Procedures.* The first and most important step in any evaluation plan is to secure a thorough detailed description of each job to be evaluated.

The best method of obtaining such a description is through the use of a job description form, on which should be recorded complete information relative to the job. It is recommended that the job description be prepared by the employee, reviewed and approved by the supervisor, and then submitted to the Job Evaluation Committee. A suggested form for this purpose is shown in Figure 77. The Committee's responsibility is to rate only on the basis of what the job demands. Its purpose will be defeated unless personalities of individuals, individuals on jobs, and salaries paid are excluded when determining point values applicable to the various factors involved.

The Committee should always bear in mind that its purpose is to determine the minimum requirements of each job being evaluated and should not concern itself with salaries to be paid; a point plan of evaluation makes this possible. The application of salary rates to factor point values, incentives, and merit ratings is a matter to be considered separately.

---

<sup>2</sup> Adapted from "Clerical Job Evaluation," prepared by a special committee of the Detroit Chapter of the National Office Management Association, 1946.

## JOB DESCRIPTION

Name: Typist

Date: December 3, 19 .

Dept.: Purchasing

1. Nature of work. (Please itemize the operations such as correspondence, typing, calculating, interviewing, etc., and give approximate percentage of time spent on each.)

The typing is transcribed from requisitions sent by  
the various departments of the Company.

Percent of Time Per Month

2. Machines Used. (Typewriter, calculator, etc.)

## Typewriter

Ditto Machine

3. If your job includes correspondence, do you:

Use a dictaphone? No

If so, who transcribes your letters? ..... No

If so, who transcribes your letters? ..... If  
Dictate to a stenographer? ..... No

If so, to whom? \_\_\_\_\_ None

Approximately how many letters per day? ... None

4. Is your work checked or examined by others?

By whom? \_\_\_\_\_ No. \_\_\_\_\_

Do you check work of others? ..... No

If so, whose? ..... None

Do you supervise the work of others? ..... No

If so, how many persons and nature of work? ..... None

5. As briefly as possible, give a complete description of what you do in performance of your duties, indicated above. (Attach as many extra sheets as necessary.)

Includes typing of all purchase orders for the Company—requiring the use of the ditto machine for extra copies. The orders must be accurately typed and checked. The typist must be able to identify and type special clauses on purchase orders.

*Routine:*

#### **Requis.**

Requisitions are prepared for copying as follows:  
1. They are sorted for the required routing.

1. They are sorted for the required routing.
  2. They are dated, checked for destination, and miscellaneous references stamped on them.
  3. Purchase orders are typed and checked for accuracy before they are released. These orders must be done quickly as well as accurately.
  4. All orders are checked for the correct number of copies to be included and for all necessary clauses and notations.
  5. They are then sent to an authorized party to be signed.
  6. After they have been signed they are returned for separating and mailing.
  7. A record is kept on cards of the purchase order number and the rating given to special orders (AA3, AA4, etc.). These orders are also recorded with the vendor's name, purchase order number, date of delivery, material required and the total cost of the order.

May be called upon to replace other stenographers or typists in other divisions of the Purchasing Department during vacations or illnesses and also relieve at the Information Desk. Also does miscellaneous typing of reports and statements for various divisions. Answers inter-company telephone.

Approved .. . . . . Immediate Supervisor

## JOB FACTOR CREDITS

	<i>Maximum Point Values</i>	<i>Percentage to Total</i>
<b>SKILL . . . . .</b>	<b>250</b>	<b>25</b>
<b>ELEMENTAL</b>		
1. General or special education . . . . .	160	16
2. Training time on job . . . . .	40	4
3. Memory . . . . .	40	4
4. Analytical . . . . .	95	9.5
5. Personal contact . . . . .	35	3.5
6. Dexterity . . . . .	80	8
7. Accuracy . . . . .	50	5
<b>Total . . . . .</b>	<b>500</b>	<b>50</b>
<b>RESPONSIBILITY</b>		
8. For company property . . . . .	25	2.5
9. For procedure . . . . .	125	12.5
10. Supervision . . . . .	50	5
<b>Total . . . . .</b>	<b>200</b>	<b>20</b>
<b>EFFORT</b>		
11. Place of work . . . . .	5	.5
12. Cleanliness of work . . . . .	5	.5
13. Position . . . . .	10	1
14. Continuity of work . . . . .	15	1.5
15. Physical or mental strain . . . . .	15	1.5
<b>Total . . . . .</b>	<b>50</b>	<b>5</b>
<b>Grand Total . . . . .</b>	<b>1000</b>	<b>100</b>

From the foregoing it will be seen that 25 per cent of the maximum credits allowed are allocated to the factor "Elemental," 50 per cent to "Skill," 20 per cent to "Responsibility," and 5 per cent to "Effort."

Obtain a complete description of each job to be evaluated.

Review each job description carefully and indicate thereon any item needing special consideration.

To the Job Analysis Sheet (Figure 78) post all pertinent data necessary to determine factor ratings. Assuming you were rating one hundred jobs, you should rate all of them one factor at a time.

When Job Analysis Sheets have been prepared for all jobs being evaluated, the sheets should be sorted into groups, as determined by the total number of points credited to the individual jobs. After this breakdown is made, the points credited to each factor for each job should be reviewed in relation to all jobs within that particular group. The next step is to summarize the information.

	Point Value
1. Grammar school or equiv. ....	0
2. Up to 2 years' high school or equiv. ....	2—4
3. Up to 4 years' high school or equiv. ....	6—8
4. Up to 2 years' special training above a high school education or equiv. ....	10—12
5. Up to 4 years' special training above a high school education or equiv. ....	14—16

*Factor No. 3—Practical Experience Required:* The degree of this factor is determined by the amount of experience judged necessary to fulfill minimum position requirements.

	Point Value
1. Where no experience is necessary .....	0
2. Where some experience is preferable but can be accumulated during 3 to 4 months' employment with the company .....	1—3
3. Where sufficient experience would necessitate approximately one year of employment with the company in related positions .....	4—6
4. Where the necessary experience would require approximately three years' employment with the company in related positions .....	7—9
5. Where considerable experience is necessary in related positions so as to acquire a thorough over-all knowledge; this experience to absorb approximately five years .....	10—12
6. Where extensive experience is imperative in order to fulfill the position requirements. This would be considered as requiring over five years' company experience in related positions .....	13—15

*Factor No. 4—Analytical Requirement and Complexity of Work:* This factor recognizes the difficulties and complications of the assigned task and measures the extent to which the work involved requires analytical ability, exercise of judgment, initiative and ingenuity.

	Point Value
1. Where the assigned task is of a simple nature and obvious conditions can be readily recognized .....	0
2. Where the assigned tasks consist of routine or standard matter, but demand recognition of a deviation from the accepted routine. ....	1—3
3. Where the assigned task necessitates a weighing of facts and the exercise of a limited amount of judgment in decisions. It also involves performance of several different kinds of clerical or manual operations .....	4—6
4. Where the assigned tasks make it necessary to devise data, requiring certain initiative and ingenuity, solve special problems, and make reliable decisions .....	7—9
5. Where it is necessary to ascertain certain facts, weigh them, and present important or costly decisions to management without the benefit of guidance .....	10—12
6. Where unusual and important facts must be weighed and analyzed, calling for an extreme exercise of good judgment, and where independent action is essential and will have a bearing on quality or cost .....	13—15

*Factor No. 5—Accuracy:* This factor considers the opportunity the work offers for errors and the relative magnitude of the consequences. It also recognizes the availability of supervision to detect errors promptly and the amount of dependence placed on the accuracy with which the task is performed.

	Point Value
1. Where possibility of error is negligible. All jobs require a certain degree of accuracy .....	1—2
2. Where preliminary routine work is assigned, and where errors are possible but easily detected and corrected .....	3—4
3. Where the cost of correction will be considerable, because of the difficult nature of the work and the degree of dependence placed on the performances .....	5—6

*Factor No. 10—Continuity of Work:* This factor refers to the degree of continuous performance without benefit of interruptions or breathing spells due to necessary conversations with others, etc.

	Point Value
1. Where ample time for stoppage of work is possible due to any causes ..	0
2. Where work is varied and necessitates some stops for discussion or advice .. . . . .	1
3. Where the work is routine and planned for long periods with little opportunity for interruption .. . . . .	2—3
4. Where it is imperative to stay at the task constantly with rare opportunities afforded for breathing spells .. . . . .	4—5

*Factor No. 11—Physical Strain on Senses:* This factor recognizes the nervous strain or eyestrain connected with certain tasks or positions.

	Point Value
1. Where there are few involuntary interruptions or very little close figure work which demands concentrated vision .. . . . .	0
2. Where part of the work involves eyestrain .. . . . .	1
3. Where the major portion of the work involves constant eyestrain or close figure work .. . . . .	2—3
4. Where numerous involuntary interruptions are part of the day's work, requiring much concentration and nervous strain to pick up the trend of thought or stoppage point .. . . . .	4—5

*Factor No. 12—Relations or Contacts:* This factor measures the extent and relative difficulty and importance of the work handled with and through other departments or other companies in connection with the effect of these contacts on plant or public relations.

	Point Value
1. Where this factor is negligible .. . . . .	0
2. Usual contacts with other departments within the company on matters involving flow of work which has been standardized to a large extent and requires no decisions .. . . . .	1—2
3. Contacts with other departments within the company on matters involving decisions or disposal of certain activities which may lead into many discussions as to the best disposal or decision .. . . . .	3—4
4. Contacts within the company or with the public or both which involve the making of substantial adjustments which involve money or company policy .. . . . .	5—6
5. Contacts within the company or with the public or both which involve important agreements or disposal of serious matters which could greatly affect future relations .. . . . .	7—8

The total selected point value, when converted to its relative monetary value, indicates the maximum job rate. A system of increments and decrements has been established, and the current monetary value of the job is fitted into the closest rate in the increment progression. A rate range is employed, and the number of grades within the range is decided by the possible spread of ability that can be applied to the job.

**Incentive compensation versus straight salary.** Ever since Mr. F. W. Taylor pointed out the desirability of accurately measuring the quality and quantity of production of every employee and compensating him either wholly or in part on a measured produc-

tion basis, it has been the practice of an increasingly large number of manufacturing organizations to pay their factory workers on some sort of incentive wage plan. That the adoption of such methods has been of untold advantage to both the employer and the employee needs no reiteration here.

Prior to about 1925 only scattered attempts were made to apply the principles of incentive compensation to offices, owing primarily to the assumption—which has since proved to be quite without foundation—that both office work and office workers were somehow “different.” It is true, to be sure, that in many offices, particularly those of small or moderate size, the same employee does many different kinds of work. It does not follow, however, that it is impracticable to install incentive compensation methods in other situations where the work is more specialized and can readily be measured. During the last twenty years, more and more concerns have found it both practical and desirable to adopt some type of extra incentive or bonus plan in compensating their office workers. The results in almost every case have been increased earnings for the employees and a decreased cost to the company per unit of work performed.

3. The next thing for the office manager to do is to separate the standard operations that are expected to appear from day to day from the other, miscellaneous operations. He should then consider each of the standard operations to determine the units. In standardizing order writing, for instance, it may be best to consider the entire order as a unit, or, if the number of items per order varies a great deal, it may be fairer to use the number of items per order as a unit.

4. After the unit has been determined, the office manager should outline each operation, and describe exactly what the operation consists of and what the unit is. This is then given to the clerk and explained to him carefully. All unstandardized or miscellaneous work should be placed in the "Miscellaneous" column, with an explanation of the work in the "Detail" column.

5. At the end of the week the office manager should figure the total minutes, the units, and the units per minute for each operation as shown on the clerical production time sheet. From his own experience and from the experience of his department head, he should consider whether this unit per minute is about what an average clerk should produce. Whenever the figure seems extremely high or extremely low, an immediate investigation should be started with a view to determining what is wrong, so that the faults may be corrected.

6. After the office manager is satisfied that all faults regarding the operations of the clerk have been corrected and that the clerk is working at a fair average speed, he should then consider this average speed figure in units per hundred as standard time. In determining this unit or standard time the office manager should allow about 6 or 8 per cent for idle time or recreation. Whenever possible, the clerk should have standardized work only. If there are several in a department, perhaps one clerk will do all unstandardized operations.

7. If the office manager wishes to establish a premium or bonus system, there are various methods of doing this: He can establish a rate per piece or per unit, thus placing the standardized work on a straight piecework basis. He can use the unit as a method of raising a clerk's pay, or of establishing different rates of pay according to the output. Or, he can compute the difference between the standard time and the time used, and allow a bonus for this saving. For example, a girl may be guaranteed a stipulated salary. During the week she works 2000 minutes on work for which the standard

time is 2400 minutes. The girl saves 400 minutes, and therefore is paid a bonus based on a certain amount per minute saved.

Specific examples of incentive compensation methods. The following cases illustrate a number of specific applications of incentive compensation methods.

**Bookkeeping-machine operation.**<sup>4</sup> For an average of 350 postings a day the bookkeeping-machine operator receives a bonus of \$7 per month in addition to her regular salary; for each 50 postings over 350 she receives \$3.50 extra. A penalty of 25 cents per error is charged the operators when they are directly responsible for the error. The operators average from \$17 to \$24 extra per month.

**Dictaphone operation.** A bonus is paid based on the total number of square inches of typed material produced by the group. The bonus is calculated as follows:

$$\frac{\text{Total output} - (4100 \times \text{No. of Operators})}{4100 \times \text{No. of Operators}} = \%$$

$$\frac{\% \times \text{Total wages of Operators in department}}{\text{No. of Operators} \times 2} = \begin{matrix} \text{Dollars of} \\ \text{bonus per} \\ \text{Operator} \end{matrix}$$

*Example:*

$$\frac{(\text{Total output}) - (4100 \times \text{five Operators})}{25,000} = \frac{20,500}{25,000} = 7,500$$

$$\frac{7,500}{20,500} = 36\% \quad \frac{(\text{Total wages})}{\$90.00 \times 36} = \frac{\$90.00 \times 36}{5 \times 2} = \$3.24 \text{ (Bonus)}$$

**Punching tabulating cards.** Operations are divided into three classes, depending on the difficulty of the reports involved, and a bonus rate is established for production above the standard in each class. This bonus rate increases from 1 cent to 24 cents per hour. Bonuses are paid every four weeks on the regular pay day, and are based on records for the entire period, great value being attached to sustained output for a month. Five per cent of the bonus earned for the entire bonus period of four weeks is deducted for each day's absence.

Where errors occur, a deduction of five cards for each error is made from the class in which the error occurs, before figuring the bonus. This applies to cards incorrectly punched and detected after leaving the operator's desk.

#### **Methods and experience of a large clerical organization.**

*Transcribing cylinders.* For transcribing cylinders the company has established a standard task of 2000 points per week and a rate of \$1.25 per 100 points net. When a new operator is put on the pay roll she is given a minimum guaranty for four weeks. If she produces in excess of 2000 points net, she is given all she earns. If less, she receives the weekly minimum guaranty. At the end of four weeks, the guaranty is withdrawn and she is paid at the rate of \$1.25 per 100 points for her net production up to 3000 points per week. When 3000 points net per week ("the point of participation") has been reached, the rate is automatically reduced to 75 cents per 100 points.

Figures for other operations are summarized below.

*Typing, including cards, listing, straight copy work, form letters, and addressing envelopes.* Rate, 90 cents per 100 cyclometer points net. Four weeks' guaranty, \$17. Standard task, 1900 points net. Point of participation, 2700 points net. Rate for excess production, 60 cents per 100 points.

*Addressing envelopes.* For addressing envelopes from letters written by transcribers, the rate is \$1.25 per 100 cyclometer points net. Four weeks' guaranty, \$17. Standard task, 1360 points net. Point of participation, 1900 points net. Rate for excess production, 75 cents per 100 points net.

*Speed-o-feeder.* Speed-o-feeder addressing envelopes from cards or lists. Rate, 22 cents per 199 envelopes. Point of participation, 11,000 envelopes net. Rate for excess production, 15 cents per 100 envelopes.

*Penalty for errors.* The penalty for errors is 5 per cent of the daily production per 100 typographical errors and for each letter which, due to the operator's carelessness, must be rewritten.

*Results obtained.* The two most frequently voiced objections

to compensation on a measured production basis are the tendency of the management to cut rates and the tendency of the workers to indulge in harmful speeding. This company believes it has eliminated these two difficulties by establishing for each operation a "point of participation." This point represents a good, steady, day-in-day-out production for a fast worker. Workers are given the regular rate calculated weekly until this point is reached. After passing the point of participation they are paid roughly 60 per cent of the standard rate. The company is interested in keeping its workers. It does not want them to injure themselves through over-exertion or nervous strain. For these reasons a part of the incentive is removed when the point which is regarded as a fast week's work is reached.

Under this plan the transcribers' production increased 27 per cent. Cost decreased 16 per cent. All the workers earned more than their former salaries. Typing cost decreased 28 per cent. Some of the typists more than doubled their production. Approximately 15 per cent of the workers regularly exceed the point of participation.

A questionnaire to which no signature was required indicated that 85 per cent of the workers were in favor of the plan. The remaining 15 per cent were not hostile, but would be as well satisfied with straight salary work. None reported any feeling of strain.

The advantages of bonus plans for dictating machine operators. The following discussion by Miss Trusselle Harvey, of the General Electric Company, of bonus plans answers some questions usually asked about such plans.<sup>5</sup>

Any odium still attached to bonus plans for office workers is due in major part to popular misconceptions about them—and these, fortunately, are disappearing fast. There is no reason, however, why bonuses should not be *entirely* acceptable to, even popular with, office workers.

The gains to the workers include, in addition to the obvious and most important factor of increased earnings, such less obvious benefits as equalization of working conditions (removing a frequent cause of friction); relief from the pressure of supervisory concern over production; and greater job satisfaction in seeing extra effort and ability promptly rewarded. Management, in turn, benefits from the lowered operating costs resulting from increased production, as well as from the improved income status of the employee. Higher income jobs draw and hold more responsible, better educated, workers.

<sup>5</sup> Harvey, T., "The Advantages of Bonus Plans for Dictating Machine Operators," *Office Management and Equipment*, April, 1916, p. 37.

Among office jobs affording possibilities for incentive applications, dictation machine transcribing offers a fruitful field because of the standardized, repetitive nature of the work.

Installation of a bonus plan for dictation machine operators should be preceded by studies of existing averages over a considerable period of time and investigation of similar plans in other offices, as well as conferences among comptroller, office manager, and transcribing department supervisor to determine and agree upon standards and objectives.

When a bonus plan is first contemplated, the supervisor of the transcribing department usually has four major questions. She wants to know:

1. Won't a bonus plan affect morale? Don't operators resent having to work harder for the same income?

This is popular misconception number one. It presupposes that the employer is going to cut salaries to a nominal figure—substituting a bonus for the difference. There is no reason why this should be done. The bonus will pay for itself, even if superimposed on existing salary scales. By way of illustration, assume that a unit of four dictation machine operators transcribe an average of 700 lines per day. After the installation of a bonus plan, the total production is increased by an average of 150 lines per day per operator—an altogether reasonable expectation. On a bonus basis of, say, one-half cent per line for every line transcribed over and above the former average of 700 lines, the output and bonus of each operator might result in something like the following:

	New Average *	Required Average *	Bonus Paid on *	At $\frac{1}{2}\text{¢}$
Operator 1	750	700	50	\$ .25
Operator 2	900	700	200	1.00
Operator 3	800	700	100	.50
Operator 4	950	700	250	1.25

\* Figures refer to number of lines transcribed.

As a direct consequence of the bonus, then, the total production of the four operators has increased by 600 lines per day—the approximate output of one additional operator, obtained at a cost much lower than would have been involved in hiring a new operator.

The amount of bonus and required lineage before bonus can be adjusted upward or downward at the discretion of the individual company to yield more or, if desired, less than this amount in savings, but best results are obtained when the company and the employee share equally in the monetary benefits resulting from the increased production.

2. Doesn't the quality of work suffer as a result of the speed-up?

The answer to this question depends upon the standards the company has maintained toward quality of work. Employees do not easily lose their good work habits, especially if the company itself has consistently maintained high quality standards. The need for accuracy and care should be emphasized at the time when the bonus plan is installed and should be stressed during the training period for new employees. Re-

course to frequent reminders, spotchecks, and occasional "inspirational" talks may be necessary in individual cases.

To strengthen the initial advantage of good training—particularly in companies where high quality has not been attained prior to the installation of a bonus, or where it is felt that the bonus might cause a lapse—the system can be installed with a condition, namely, that only operators whose work is up to standard shall be eligible for the bonus. There will always be a few whose quality of work and immediate production entitle them to a bonus at once—entitle them, in effect, to more money without extra effort. These employees will enthusiastically advocate the bonus plan, causing others to fall in line. The supervisor may well find that this group tends to pull up the standard of the whole department.

3. How can work be distributed fairly so that all have an equal opportunity to make a bonus when the dictation of some men is more difficult than that of others and must be confined to operators experienced in handling it?

First, it is important to eliminate all obvious sources of inequity. For example, employees should not be permitted to choose work from a central rack at their own discretion. The work should be distributed on an impersonal basis by the supervisor or by an assistant who will be above favoritism. Then, the problem can be approached in one of two ways:

(a) Grade work according to skill required, confining dictation falling within those grades to operators best able to handle it, and paying a graduated bonus proportionate to the skill required. If desirable, the same principle of graduated skill might be worked out on a salary basis, leaving the bonus a uniform amount for all

on workers if she has reason to believe that they are putting forth their best efforts.

**Other forms of extra compensation.** In many offices, particularly in those where the nature of the work is such that measured production methods of compensation are not practical, other plans of extra compensation are in force. For example, one well-known company has in operation among its branch offices what is known as a "gain-sharing system." Under this system each branch of the company works out a per dollar cost of doing business for its territory. These costs are a total of what it considers average good management can produce. To these costs,  $2\frac{1}{2}$  per cent is arbitrarily added, and any savings under these total costs are divided equally between the company and the branch office, if the amount does not exceed 25 per cent of the total salaries, or 25 per cent of the individual salaries. This gain is distributed among the office or clerical employees in the branch, more or less according to salaries, but more particularly to the individual employees producing the best results. Gains in excess of 25 per cent, or losses, are carried forward, and, if not absorbed, are dropped in a six-months' cycle.

Annual bonuses, usually paid at year-end, are also in wide use among business concerns, particularly in banks and financial institutions. Such bonuses are usually based either on length of service or salary, or on a combination of these factors.

**Conclusions regarding incentives.** Whatever one may think about the theoretical desirability of paying a bonus to get something done which employees should be expected to do without additional reward, the fact is that everyone, from executives to the lowest-paid employee in the organization, responds to the spur of an incentive. In dollars and cents the amount of the bonus may not seem at first thought to be worth the effort. Yet when it is considered in the light of the proportion that it bears to the total earnings of the employee in question, the reason for its good effect becomes more apparent. Thus, an opportunity to earn \$1.50 extra a week may not seem of much consequence to the department head whose salary is \$5000 a year. To the employee receiving \$30 a week, however, such a bonus is equal to 5 per cent of her salary. An opportunity offered to the department head to increase his income 5 per cent would certainly be regarded favorably, and the same psychological laws that govern his reaction motivate the feelings of the rank-and-file worker.

## 24

### *Supervision of Office Employees*

In the preceding chapters the principles, methods, procedures, and techniques with which the practical office manager should be familiar have been discussed in some detail. A knowledge of all of these matters is essential to success in office-management work. Yet a person who has only a knowledge of office system, routine, and operations, no matter how complete it may be, can never successfully fill the position of office manager. The manager also must be an executive. Every office executive has the two-fold job of getting out the work and handling human relations.

The average person craves leadership. Most people want a leader to follow. All humanity is made up of leaders and followers. The followers are legion, but good leaders are scarce. The person with ability to lead has no difficulty in finding willing followers. But people will not willingly fall in line behind a superior who does not lead.

What supervision involves. Literally, supervision means looking over or overseeing, and its object is to get the work done on scheduled time and as economically as possible. Simple as this may sound, it is in itself a large order—larger in fact than the average office supervisor is able to handle satisfactorily. A brief examination of some of the more important factors involved in supervision will make the reasons for this statement clear.

Supervision involves, first of all, a knowledge of the extent and limits of the authority and responsibility inherent in the position or granted to the individual who is to supervise. The necessity for clearly defining authority and responsibility has been stressed so frequently in previous chapters that it is almost trite to repeat it here. Yet nowhere is it more important that authority and responsibility be clearly defined than in the field of office management. Unfortunately, the office manager himself sometimes suffers because of the lack of a clear definition of his own work. He may be held responsible, for example, for the general cleanliness of the office, yet

the contractor whose employees do all such work may feel that his primary responsibility is to the purchasing agent who signed the original contract or to the treasurer who pays him each month.

No matter what his own position and problems in this respect may be, however, the office manager should be sure that he does not impose similar burdens on his subordinates. If, for example, the nature of the business is such that skeleton staffs of the various office service sections, such as the central stenographic, the duplicating, the mail-and-messenger, and the elevator service, must be maintained after hours, either regularly or periodically, the office manager should delegate to one person the responsibility for all such activities. To allow each section to function independently under such circumstances is to invite internal disagreement, with consequent jeopardy to the work. The first essential of leadership, therefore, is the ability to assign authority and responsibility clearly and definitely.

Second, proper supervision involves a thorough knowledge on the part of the supervisor of the work to be done. Again, this point may seem trite and elementary, yet in practice it is by no means always observed. While the highest management executives naturally do not expect the department heads to be familiar with every detail of every activity carried on in their departments, they have every right to expect them to know quite specifically what is going on.

As an important department head, the office manager should make it his business to keep closely in touch with all the activities of his department, so that when he is asked, perhaps quite unexpectedly, what the company's practice is in a given matter or why a certain thing is done in a particular way, he can answer without hesitation. An executive or supervisor who must rely on an assistant to supply the salient facts about a matter over which he has control soon loses the respect of his superiors and of his subordinates.

While other qualities are essential, of course, a thorough knowledge of the work is an all-important point to be borne in mind in the selection of a supervisor. It is highly desirable, for example, that the person in charge of a centralized stenographic transcription department be an experienced stenographer or operator herself. The office manager should make it his business to check up periodically on the details of the work for which each supervisor is responsible, in order to see that each one is fully familiar with what is going on in his own section.

Third, good supervision involves an appreciation of the relative importance of current and pending work. An industrial engineer once said that all business operations consist of two kinds of details, symptomatic and routine. The intelligent and experienced executive knows almost instinctively into which class any given matter falls; if supervisors do not know, it is one of the prime duties of the office manager to teach them as quickly as possible. A good sense of proportion is as important in business—and in life—as, for instance, a good sense of humor.

Specific cases with which both the office manager and the supervisor are familiar, and which are taken directly from incidents in the day's business, provide the best object lessons, if any are needed. For example, a supervisor may report to the office manager her inability to complete certain work on time. Two essential questions should be settled at once: first, the importance of the uncompleted work and, second, the cause of the delay. If time is not an especially important factor, or if the delay was caused by the unexpected and temporary absence of an employee, the matter may be regarded as routine. If, on the other hand, the work must be finished by a given hour or if the department is constantly behind schedule, and if this situation is merely one of a number of similar cases that have occurred recently, then the matter obviously is one that requires immediate attention and thorough investigation. More than one office manager has suffered a serious loss in standing in the eyes of his superiors because he has neglected to make sure that his immediate subordinates had the proper appreciation of the relative importance of current and pending work.

Fourth, supervision involves the ability to get along well with others—including superiors and subordinates. One of the practical problems involved here is to strike the proper balance between being too strict and being too lenient. Good discipline is essential, of course, in any organization. The strict disciplinarian, however, is more likely to receive obedience rather than coöperation. The lenient supervisor, on the other hand, often does not have the real respect of his subordinates. The best supervisors—and executives—are those who have the confidence, coöperation, and respect of their superiors, associates, and subordinates.

An essential quality for getting along well with others is the ability—and willingness—to see both sides of a situation. All too often supervisors thoughtlessly disregard the responsibilities, feel-

ings, or ideas of others, and then wonder why they do not seem to get along well with them. The supervisor may know at eleven o'clock in the morning, for example, that rush work is coming through that will make it necessary for certain employees to work overtime that evening. However, instead of letting her subordinates know promptly—before lunch perhaps—she says nothing until four or half past in the afternoon, when she lets it be known that certain employees must stay overtime. Naturally they resent such late notice, and if the practice becomes a habit, they may begin to make excuses for not staying, thus embarrassing the supervisor and her superior as well.

Fifth, the supervisor must be able to teach others. Reference was made in a previous chapter to the fact that training office employees necessitates not only a thorough knowledge of the work, but also the ability to impart that knowledge to others. Patience is also essential to success in all such work.

One common fault, which the office manager constantly must guard against, is the tendency of supervisors to assume that employees understand just what to do after some procedure has been explained to them once, or twice at the most. While constant reiteration should not be necessary, the average mind can absorb and hold only a relatively few simple instructions given at one time. Thus for the supervisor to spend the first half-day with a new clerk going over the work, to make a brief check-back a day or two later, and then to assume that the clerk is trained—or that at least she certainly should be—is to expect the impossible. Whenever the office manager has reason to believe that this is being done, quite unintentionally, perhaps, he should query the supervisor carefully as to exactly what steps are being taken to train new employees, emphasizing the fact that successful training is a relatively slow process which necessitates going back over the same ground a number of times.

Last, the supervisor should fairly represent—not misrepresent—the viewpoint of the management. Some supervisors are prone to lay the blame on "the management" when an unwelcome order must be given or a penalty imposed. While it is of course true that the management must accept the final responsibility for all decisions, it is manifestly unfair to lay the blame at its door for something for which it is not responsible. A supervisor, for example, may have neglected to have certain work completed when it was

due, solely because of inertia or procrastination. Realizing the vulnerability of her own position, she blames "the management" for demanding that the work be gotten out immediately.

The office manager himself must be especially careful to represent fairly the viewpoint of the management. In most cases the office manager is the contact point between the executive officers on the one hand and the supervisors and employees on the other. He is frequently informed of management decisions having to do with policy and then given the responsibility of interpreting them to those affected. In such cases, of course, he must be sure, not only that he fully understands the executive viewpoint and the reasons for it, but also that he interprets it fairly to others. There is, perhaps, no one person in the organization who has a greater opportunity to reflect the viewpoint of the management correctly and fairly to the employees than the office manager.

**Assignment of authority and responsibility.** In an address before the 1944 Office Management Conference of the American Management Association, James P. Mitchell, Director of Industrial Relations of R. H. Macy & Co., made the following observation about a large organization which had been engaged in the production of vital war material:<sup>1</sup>

I was struck, as soon as I set foot in the door, with the attitude of the employees. The place reeked of inefficiency, lack of discipline, carelessness, and all the other things which we associate with low morale. The question naturally came to mind, "Why isn't this company with its well-conceived personnel program effective on the firing line?"

A basic reason was to be found in the absence of real supervision in the company. In spite of a comprehensive job analysis program which attempted to define job content and time every operation, no attempt had been made to define clearly the job responsibilities and authority of the lower, middle, and top management. As a result, first-line supervisors often did not know to whom they reported or why, nor did they know what their responsibilities and authority were and, of course, they evaded whatever responsibility came their way. Conflicting instructions from higher authority and misinterpretation of company policy caused utter disregard and disrespect for supervisory authority on the part of the employees. Because the organizational responsibility of the supervisory line had not been clearly established and supervisors' functions had been only hazily defined, and because the line supervisors were subject to a constant barrage of conflicting instructions from numerous staff divisions, including the personnel department, the work of most

<sup>1</sup> Mitchell, J. P., "Fundamentals of Employee Morale," *Office Management Series No. 105*, American Management Association, 1943, p. 5.

units in the company was poorly organized. The employee reflected the confusion because:

1. He received no supervision, guidance, or direction from his immediate supervisor who, in reality, was the only management representative to make effective, so far as he was concerned, the well-conceived personnel policies; and,

2. Lacking supervision, he, the individual, did not have a satisfying day's work—this is, satisfying to him in terms of quantity or importance. He either had too much or too little to do—in most cases, too little—and I submit that the employee who does not produce a well-defined, sustained, daily output is a potentially disgruntled employee whose morale will never improve despite all fancy morale programs.

As one of the largest employers of all time, the Army Service Forces, which employed 800,000 employees, among whom were many thousands of office workers, recognized the problem of supervision as a paramount one. General Somervell stated to a Congressional Committee that the solution of the manpower problem among civilian workers in the War Department lay in providing adequate supervision. As an aid in providing satisfactory supervision, the services of the Training Within Industry Service of the War Manpower Commission were enlisted.

The office manager, whose functions may well be construed to parallel for a given company the functions which the Army Service Forces performed for the War Department, will do well to accord an equally important place to supervision in any blueprint for successful accomplishment of his responsibilities. Although the science of supervision can be exceedingly complex, its fundamentals though expressed in different language can be reduced to basic factors such as the essentials of leadership which have been outlined here.

The Training Within Industry Service of the War Manpower Commission, in developing Job Instruction Training, Job Method Training, and Job Relations Training, stated that efficiency and improvement are the result of skilled supervision and that such skill can be acquired by attention to basic needs.

In this program it is emphasized that skilled supervision requires a thorough knowledge of responsibilities and authority and that such knowledge must be met currently if subordinates, whether supervisors or staff employees, are to know and do their jobs efficiently and well.

Many companies have attempted to meet the need for keeping the knowledge of responsibility current by the requirement that any assignment involving a change in responsibility or authority be

reduced to writing. Size of company and need for flexibility must be determining factors in setting up such procedural requirements. In general, if regular areas of responsibility and authority are understood by those who must accept and exercise these, concise and clear verbal instructions will suffice and provide operating flexibility.

**Knowledge of the work to be done.** The importance of having a knowledge of the work to be done cannot be overstressed. If the reader who is an office manager feels, as he reviews that which is encompassed in office management as outlined in the pages which have gone before, that this is a large order, it can only be said that he is correct. However, knowledge of the work to be done is the keynote to successful supervision.

Knowledge of the work to be done influences the caliber of supervision in diverse ways. It is obvious that without such knowledge bottlenecks and delays may result, and few office managers can get work done on schedule or manage economically under such circumstances. In the case of office management, where so much of the work to be done is of a service nature and where many phases involve getting results through supervisors and employees who must work with supervisors and employees in other company departments, without it no satisfactory assignment of authority or responsibility can be made. When gauging the relative importance of jobs to be done and when reviewing reasons for delay, no meaningful yardstick can be applied without a knowledge of the work to be done.

The author has not attempted to relate the realm of medical and psychiatric practice to office management. Nevertheless, when lack of knowledge of the work to be done results in inefficient or delayed service, there can be no degree of success for the office manager in getting along well either with his superiors or with his subordinates. The office manager who finds himself harassed and criticized by those departments to whom he renders service and by his superiors for lack of results will receive little sympathy from his subordinates if the trouble can be found in his lack of knowledge of the work to be done.

Because office management is a business matter involving many types of operational, service, and office production detail, there is little that can be taught on the basis of inspiration alone. Lasting and effective teaching, which has been covered under the references to training in a previous chapter, can best be done by following the tell-and-explain, show-how, observe-and-check, and

follow-up-and-repeat principles on which all training is based. Only with knowledge of the work to be done can this type of teaching be achieved.

In that representing his management correctly and fairly is an integral part of any supervisor's job, it is essential for effective supervision that each individual in a supervisory position know his expected part in a company's program of employee-management relations.

The results of employee attitude surveys which were discussed in earlier pages have reflected in many instances the disrespect for supervision and the poor morale which results from the poor supervision of those who do not have a proper knowledge of the work to be done. In a recent employee attitude survey conducted by a large life insurance company, one of the questions asked of employees was: "Does your immediate supervisor have adequate knowledge for the satisfactory performance of his responsibilities?" The general morale of the company was high, based on the analysis of the confidential replies received, but in every case where the majority of a group of employees reporting to a particular supervisor answered the question above negatively, the morale of that group was either lower than the average level for the company or was poor.

**Appreciation of the relative importance of work.** No single statement satisfactorily defines the quality which must be present if the supervisor is to master this quality. Judgment and common sense combined with an awareness of the need for timing are the characteristics which make for effectiveness in this quarter. Unless the supervisor can overcome any deficiencies in this direction, he cannot achieve good results. Mr. LeRoy H. Kurtz, of the Department of Public Relations of the General Motors Corp., presented a paper before the Society for the Promotion of Engineering Education at its fiftieth annual meeting in which he discussed the maintenance of executive efficiency. He made the following statements in summary:

For their own guidance and to establish their proper standing in the organization, executive personnel should be evaluated periodically.

Prompt action should be taken to head off any apparent unfavorable trend in executive effectiveness.

Long- and short-term goals and standards of performance should be established for the business as a whole and for the individual executive and the departments or branches under his supervision.

The result of good leadership is a confident and ready organization, able to handle calmly any emergency as it arises. In such organizations it is not necessary to make a hasty sweep of some officials when new conditions arise, on the ground that they were competent to operate in normal times but have suddenly proved useless when the going has become hard.

As a means of evaluating executive personnel, he suggested the determination of effectiveness in terms of Executive Techniques. The scoring scale recommended for this determination weights very heavily those qualities which relate to appreciation of the relative importance of the work to be done. Ten contributing techniques are to be evaluated, and among them are Organization Ability, Coördination, Analysis, Planning, and Execution. In other words, 50 per cent of the techniques employed bear on the supervisory executives' ability to get work done by analyzing, planning, organizing, coördinating, and executing. These are the techniques which if skillfully applied lead to the proper appreciation of the relative importance of the work to be done.

**Getting along well with others.** This is a many-sided problem. There are superiors, subordinates, those for whom services are performed, the public, and other categories with whom those in office management must get along. Public and employee relations are not fads that will diminish and disappear. Many intangibles and semantics surround any presentation, and not merely chapters but many books have been written on these subjects alone. No discussion here can be complete, but in outline and by example some salient material is included to give the reader some perspective on this field, which warrants a great deal of intensive and considered study.

Mr. L. C. Hart, Vice President of the Johns-Manville Corporation, in discussing the subject of human relations, stated:<sup>2</sup>

Let us consider first our immediate superiors and higher executives. "Handling the boss" intelligently is truly a science and an art in which unfortunately too few persons are adept. The science is the "knowing how" and the art is the "technique of execution." To be efficient in this phase of human relations, the individual must be a constant student of the temperament, moods, methods and ambitions of the "boss." He must direct his efforts and pattern his operations in accordance with the known wishes and the desired objectives of his superior. I do not

<sup>1</sup>  
<sup>2</sup> Hart, L. C., "Human Relations in the Office," *Annual Proceedings, 1914, National Office Management Association*, p. 62.

imply by this statement any semblance of "apple polishing." No real executive respects a "yes" man. But I do mean that there is always a proper time and method or avenue of "approach." Gage the proper time and select the logical method as the result of intelligent study, thereby eliminating or circumventing the numerous obstacles so likely to be encountered when the "approach" is made in careless or haphazard fashion. Intelligent planning and execution accomplish amazing results in obtaining executive approval of known desirable proposals.

Undoubtedly the most fascinating phase of human relations is the technique of handling subordinate personnel. This does, at least, present the best opportunity for management to make a truly valuable contribution to employee welfare as well as to serve mankind in general.

It is commonly recognized that problems in supervisor-employee relationships multiply as companies grow larger. Aside from the material complications which result from physical and mechanical problems encountered, it is agreed that a basic difficulty springs from the treatment of employees as groups and not as individuals. If successful relations with subordinates has a single theme, it may be well to remember to establish relations with each of your subordinates and not all of your subordinates.

The Training Within Industry Service,<sup>3</sup> which has been referred to, produced a bulletin which is quoted here in its entirety as an example of the type of outline that has been used in various forms by many companies in pointing out to supervisors the importance of Job Relations:

#### How to IMPROVE JOB RELATIONS

You know how important it is not to have any lost production because of misunderstandings on the job, or because someone is slowed down on his job by things that happened off the job.

Experienced supervisors who have demonstrated their ability to "work well with people" have developed a special skill. You can acquire this skill. By making use of it, you can be more sure of meeting your production requirements.

#### EVERYDAY PROBLEMS

Does anyone in your department ever refuse to do some particular job? Or, maybe, even quit his job? Do you have any people who are discouraged, or who make other people dissatisfied?

---

<sup>3</sup> Established as a branch of the War Manpower Commission during the war, this organization has been incorporated as a private company in the state of New Jersey and is carrying on as a consulting firm serving private industry on training matters.

## TREATING PEOPLE AS INDIVIDUALS

While these foundations apply to all people, you cannot let it go at "treating them all alike." No one wants to be known simply as a number or as "the new man"—neither you nor those you supervise. We are all different. What happens to one clerk off the job makes him different from his partner on the same job. Each of us wants to be known for his own personal characteristics. There are things that *you* feel are important to *you* as an individual. You must remember other individuals feel the same way.

## THE SKILL OF UNDERSTANDING PEOPLE

Applying these foundations of good employee-supervisor relations will not guarantee smooth operation for you, but will prevent many misunderstandings.

However, there are other things which you must consider. You need to know each individual employee and what is important to him. You need to know your people for everyday operation of your department, and you particularly need this information when you have a difficult situation to handle as a job relations problem.

## HOW TO HANDLE A PROBLEM

Because changes do occur, and problems do arise, you need to have skill in handling the situations which are within your responsibility. Often you are on the spot and you feel you must do something immediately. Hasty action may mean that you have a more difficult situation to handle later. When a problem arises, consider these steps as the outline for action:

1. Get the facts—be sure you have the whole story.
2. Weigh and decide—don't jump to conclusions.
3. Take action—don't pass the buck.
4. Check results—did your action get the desired result?

1. *Get the facts.* Problems may come up because of something that happens at the moment, but you need to get the whole background. Some of it will be made up of facts about the employee—his age, length of service, and experience on this job.

You will need, of course, to take into consideration both the office rules and just "the way things are done here."

Remember in getting the facts you may think you know the person quite well, but if you classify him as a "good fellow" or a "chronic kicker," you are not really looking at an individual person. You must regard him as a person who is different from every other person in the department in every single aspect whether by a very slight or a very great degree.

As a supervisor, you must know what that man thinks and feels about

himself and the people around him. Find out what the man wants—is he able or willing to express it—and what does he think should be done? and *why*? The experienced supervisor knows that he must also consider such other factors as health and working conditions which may be affecting the man.

If more than one person is involved, you must go through the same fact-finding steps for each person. Before you can plan what to do, you must be sure you really have the whole story.

*2. Weigh and decide.* All these facts must be assembled and considered together. When all the factors are brought together, fitted in, and considered in the light of their relations to each other, many times the right answer almost "jumps out." The wise thing to do becomes clearer.

Certainly you, the man on the spot, are in the *best* place to know the *right* thing to do, for you have the most complete picture of the assembled facts. If you jump to conclusions, you make poor use of your strategic position. When you act without evaluating the whole situation you are likely to have more difficult problems to handle later.

*3. Take action.* While jumping to conclusions is a poor way to handle supervisory problems, putting off action may be equally unfortunate. A supervisor cannot "pass the buck" or he, himself, will be by-passed.

However, it is not "passing the buck" to recognize after full consideration of the problem that there are some situations which you cannot handle yourself. You also make a decision and take action when you size up a situation as one on which you need help, or recognize one which is not within your own job to handle and see that it is passed on to the person who does have the responsibility and authority.

In any action, timing must be considered—the wrong "time" can make it the wrong thing to do. -

*4. Check results.* You must determine whether your action worked. If it did not, you must re-examine the whole situation and attempt to find what of importance you overlooked. Checking the results of action is necessary in every situation because conditions change, and what worked with one individual will not necessarily work with another.

### Good SUPERVISION

One of the hardest parts of your job is that of giving consideration to the importance of people in a problem situation and knowing what is important to each individual person. This is not simply a matter of determining what is right or wrong, or deciding what is just or unjust, but is a practical approach to effective supervision. It may be thought to take too much time but day-by-day use of this skill in dealing with people will save you time in the long run.

The General Motors Corp. has produced a pamphlet which includes the material presented at a series of meetings for supervisors and executives. That this approach to good employee relations

for supervisors stresses the same fundamentals is evident from the following:<sup>4</sup>

I am convinced that the supervisor's greatest opportunity for progress and advancement today lies in improving his ability to meet on some common ground with each individual in the group for which he is responsible. In learning to know the individual inside and out, he must keep close enough to him to know the changes which affect him, and then deal with him, man to man on the job.

I wouldn't be surprised if we discovered that most of our problems with employees today have come about as a result of employees thinking of their supervisors and management in terms of THEY, and of supervisors and management thinking of employees in terms of THEY.

In view of every normal human being's need to be recognized as an individual before he can be and do his best, employees who fail to get such recognition from their employers will get it elsewhere. And their loyalty is bound to go to those who provide that recognition.

Recognizing their own replaceability and the insecurity it implies, failing to see in their repetitive tasks opportunity for promotion through service, these employees are easily influenced by outsiders who offer them the recognition, security and personal gain they are told they cannot get as individuals.

Under present conditions our value as supervisors depends largely upon our ability to develop a mutually satisfactory personal relationship with each and every employee entrusted to our leadership, regardless of the kind of person he is, his disposition, background, affiliations, qualifications, attitudes, condition, and relative worth or standing.

This important personal relationship can be developed only through frequent and regular person-to-person contacts with all employees regardless of the nature of their work or the other demands on the supervisor's time.

To win the respect and loyalty of all our employees we must recognize the best effort of every employee even though that best can be duplicated by the majority.

To win the respect and loyalty of all our employees we must approach each as a fellow human being expecting the best.

To make the most of our person-to-person contacts with our people we must learn how to listen.

No supervisor will ever win the respect and loyalty of all his people if he loses control of his temper.

To work effectively with and through the widely differing individuals who report to us we must learn to know each and every employee like a book, from cover to cover, inside and out—his personality, peculiarities, interests, ambitions, values, his ever-changing state of mind, feeling, health and condition.

You will recall our definition of behavior (the cause and cure of all

---
